## LEGEND

**FRICION LEVEL:** overall mean friction coefficient

**BITE:** initial friction at the start of the stop

**FADE RESISTANCE:** resistance to drop-off in friction coefficient under severe braking conditions

**CONTROLLABILITY:** how easy the brake is to modulate

**PAD LIFE:** how long the pad lasts

**DISC LIFE:** the life of the disc taking into consideration not only the reduction in thickness due to wear, but also maintenance of good surface condition

**WET BRAKING:** the effectiveness of the material in wet conditions

**COMFORT:** the amount of brake squeal and other vibration generated during the braking event

**PAD LIFE IN MUD:** important for off-road bikes

## PAD BEDDING

### 1. Disc and caliper preparation

For best results, when fitting new pads prepare the disc rotors by cleaning any existing deposition from previous pads off the disc surface. This ideally is done by glass beading or using a bespoke device such as a rotor-hone on the swept area. As a minimum the discs should be cleaned with abrasive paper. This is particularly important if you are switching from a sintered metal pad as the copper deposition layer burnished into the surface of the rotor can be a barrier to allowing a carbon/metallic pad from bedding-in properly. To remove the loosened deposits, cleaning with acetone or alcohol on a clean cloth is then recommended. Do not use an aerosol brake cleaner as many leave a residue that promotes brake pad glazing. Take this opportunity to check for fluid leaks. For best performance, we recommend changing your brake fluid regularly with a premium fluid (regular changing is particularly important in humid climates).

Correct centering of the caliper on the rotor is very important, even in opposed piston calipers (where there are live pistons on both sides of the blade to "self-centre" themselves).

Heavy braking should be avoided until the new linings are fully bedded across the entire mating surface. A visual inspection may be required. Scored discs will require substantially greater bed-in time, reduce overall stopping power and are potentially dangerous. We recommend replacing badly scored or distorted rotors.

### 2. Bedding (Burnish)

Initially, the brakes should be used lightly (roughly 60-70% of normal lever pressures) but frequently. As you feel the brakes come in, follow this with progressively harder braking to maximum pressure with momentary cool-down between applications. The goal here is to donate an even transfer film layer from the new friction material to the operating surface of the rotor. This takes possibly twenty applications with an organic pad, somewhat less with a sintered compound. The aim of the bedding is to get the pads up to and even above service temperatures (pads smoking is OK) but NOT TOO QUICKLY OR GLAZING MAY OCCUR. After bedding, allow the system to cool to ambient temperature before going out again.

If a fall-off in performance is experienced due to heavy braking prior to the new pads being fully bed-in, it is important to allow the brakes to cool down before continuing. A "glazed" surface condition can usually be easily remedied by an abrasive cleaning of the disc surface (rotor hone, bead, abrasive paper etc). For the pads themselves, remove the glazed surface of the pads' friction face, reinstall and repeat the bed-in procedure.

### 3. Safety Recommendations

Although all Ferodo Racing friction formulations are asbestos-free, it is prudent and recommended to take adequate precautions while working with any friction materials. The following may be regarded as best practice:

- Operate in a well-ventilated area and avoid creating dust
- Machining (not required in proper application) should only be carried out using approved dust extraction equipment
- When fitting brake components, use appropriate dust extraction equipment or a damp cloth to remove dust
- Do not use an air hose or brush to remove dust
- Dampen dust, place it in a properly closed receptacle and dispose of safely

## DISCLAIMER

All Ferodo brake pads citing race or racing on their packaging are solely developed for motorsport use. They are intended for race use only. They have not been developed for use on public roads and must not, under any circumstances, be used on public roads. The nature of racing prevents Federal Mogul from warranting or guaranteeing any aspect of the behavior or performance of the brake pads, specifically because motorsport is inherently dangerous and the use of Ferodo racing brake pads in motorsport results in inherent strains and uses over which Federal-Mogul has no control.

Federal-Mogul warrants only that the Ferodo racing brake pads have been manufactured in accordance with the manufacturing specifications and design for such pads.

In particular, and without in any way limiting the scope of the foregoing disclaimer, no warranty or guarantee, express or implied, is made as to the ability of the Federal-Mogul racing brake pads to protect the user from injury or death. By the usage of such racing brake pads the user explicitly assumes all said risks.

FURTHER TO THE FOREGOING, EXCEPT FOR THE EXPRESS WARRANTY GIVEN IN THE RESPECT OF CONFORMITY OF THE RACING BRAKE PADS TO THE MANUFACTURING SPECIFICATIONS, FEDERAL-MOGUL DISCLAIMS ANY AND ALL WARRANTIES OF ANY KIND, INCLUDING WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.

## DISC RANGE

The Ferodo disc range is perfectly interchangeable with original equipment specifications.

### RX

Full floating disc, with aluminium alloy bell, designed to eliminate warping from overheating

### RF

Full floating disc, with steel bell, designed to eliminate warping from overheating

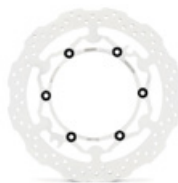

### R

Standard, steel one-piece fixed disc, designed to increase performance and reduce wear over OE

### RS

A standard, one-piece fixed disc with NO cross drilled holes, designed to increase performance and wear over

### MXR

A standard, one-piece fixed disc with cross drilled holes, specifically designed for motocross applications. Innovative design features ensure braking consistency, even in the muddiest conditions.

## DISC BEDDING

The aim of bedding is to bring the pads and discs to the full operating temperature, but gradually. Too quickly results in glazing.

Make roughly 25/30km – 4/5 laps of the track - at medium speed and avoid hard aggressive braking so that at least 90% of the friction surface of the pad comes into contact with the disc. At this point make one last lap, gradually increasing the intensity of the braking.

When replacing the brake disc, fitting new brake pads is also highly recommended (follow the pad bedding-in instructions).

**CLUTCHES RANGE**

High-performance Ferodo clutches are made of cellulose and aramid fibres, graphite and carbon. The material has unique characteristics that provides excellent performance even during the most severe use.

A grooved design facilitates cooling and the passage of the oil.

The racing versions guarantee a high heat resistance, greater durability and less compressibility as well as a more constant coefficient of friction.

**FCD\*\*\***

Set of clutch friction plates in standard friction material.

**WARNING:** If fitting with used steel plates check their flatness and parallelism.

**FCD\*\*\*\*/1**

Set of clutch friction plates in high performance friction material.

The inner and outer discs could be in a standard material.

**WARNING:** If fitting with used steel plates check their flatness and parallelism

**FCS\*\*\*\*/2**

Set of steel plates and standard friction plates.

**FCS\*\*\*\*/2S**

Set of steel plates, standard friction plates and spring(s).

**FCS\*\*\*\*/3**

Set of steel plates and high performance friction plates.

The inner and outer discs could be in a standard material.

**FCS\*\*\*\*/3S**

Set of steel plates, high performance friction plates and spring(s).

The inner and outer discs could be in a standard material.

**FCG\*\*\*\***

Centrifugal clutch and bell for scooter applications.

**FCB\*\*\*\***

Centrifugal bell for scooter applications.

**FCC\*\*\*\***

Centrifugal clutch for scooter applications.

**FSS\*\*\*\***

Spring kit.

## CLUTCH BEDDING

Before fitting the clutch, it is recommended to leave the friction plates in an oil bath (with the oil that will be used in replacing the clutch) for at least 4 hours. We recommend heating the vehicle's engine at standstill with the first gear engaged by fully depressing the clutch lever. With the engine warm start with a low speed to maintain a low to medium engine RPM and increment the gears up to the top gear and then back down to the lowest gear. Repeat this at least three times.

Before racing, perform a further bed-in with a maximum speed not exceeding 70% of the normal race speeds over a couple of laps involving a series of gear changes. This will ensure good mating between the mechanical parts.

**BRAKE FLUID RANGE**

All fluids are of Glycol ether based composition, and are suitable for brake and clutch use. Additionally they have the following characteristics:

**FBX (DOT4)**

Boiling point (typical results): Dry 243 °C, Wet 159 °C - Kinematic viscosity: 1296 cSt at -40°C.

**WARNING:** Recommended for **road** use.

**FRF340**

Boiling point (typical results): Dry 339°C, Wet 199°C - Kinematic viscosity: 2125 cSt at -40°C.

**WARNING:** Recommended for **race** use only.

		DOT4	FRF340
Technical Details: Typical measured values	Dry boiling point (°C)	248	339
	Wet boiling point (°C)	159	199
	Kinematic Viscosity (cSt)	1250	2125
Availability	0,25 litre	FBX025	n/a
	0,50 litre	FBX050A FBX050B	FRF340
	1 litre	FBX100A FBX100B	n/a

**FBX (DOT4)**

- Adheres to DOT 4 (and DOT 3) specification
- Low viscosity, low corrosion and low rubber swell
- Available in 3 bottle sizes, including 250ml
- Perfectly suited to motorcycle **road** use, where peak temperatures do not necessitate more expensive products

**FRF340**

- Premium product for **race** use only
- Market leading dry boiling point
- Compatible with ABS
- Very low corrosion

**Bottles are sold in complete boxes only**

	Box = 24 bottles
	Box = 12 bottles
	Box = 6 bottles

**WARNING**

Recommended for use by experienced mechanics only. Contains polyalkylene glycol ether and other esters. Keep out of reach of children. Avoid excessive skin contact. If swallowed, seek medical advise and show the container. In case of eye contact, flush with water for 10 minutes.

## ACCESSORIES RANGE

**FBG001 BRAKE GREASE**

FBG001 Ferodo brake grease is a mounting paste based on high viscosity silicon oil, containing also pure natural graphite.

It can help reduce:

**VIBRATION**

**SQUEAL & NOISE**

Ferodo brake grease has excellent lubricity and damping properties.

By applying to the pad backplate, you can reduce the transmission of friction vibration from the pad to the piston thus reducing brake vibration and squeal.

Each tube contains 50g of grease

**FBA574 BRAKE SHIM**

Ferodo **FBA574** is a universally applicable anti-noise shim set. Each kit is composed of 4 rubber shims with adhesive (exposed with peel-off paper).

**Composition:** 3M 468MP with 200 MP adhesive

**Dimensions:** 95x60 mm
