FIVE

YOUR FUTURE IS IN YOUR HANDS

20th ANNIVERSARY EDITION

In 2005, FIVE Gloves was born, from a desire to develop real expertise and become THE renowned specialist that it is today...with a single, straightforward ambition:

Enhance your riding pleasure by offering the most comfortable, safest, and highest-performance gloves possible. Because gloves are the essential link between a rider and their motorcycle.

Our main strengths are innovative design, use of the finest materials, impeccable fit, comfort, and premium protection. All of this reflects the essence of our signature statement, **“PROTECTION/FIT/DESIGN”**.

In 20 years, we've outfitted several million riders around the world. Whether they're champions or amateurs, on the road, track, and off-road, for every day, they all say that they prefer riding with FIVE gloves. To understand why, just try a pair.

FIVE

Welcome to the world of FIVE.

FIVE: Our name rings out loud and clear, since our mission is to protect hands (and the FIVE fingers that come with it...) during activities that require high-performance technical gloves, such as riding a two-wheeled vehicle. For 20 years now, we've been helping riders enhance their enjoyment at the handlebar, while protecting hands from injury in case of a fall, by equipping millions of motorcycle enthusiasts around the world. Gloves are an item designed for safety, but also for comfort.

Our commitment
can be stated
in three words:

**Protection
Fitting
Design.**

PROTECTION – because your hands are essential. Imagine having to spend even a single day without using one of your hands due to an injury, even one that's not serious. The smallest activity would be truly difficult, and the discomfort would be highly distressing. Protecting your hands is crucial. We don't always think about it, but as a reflex, we tend to put our hands out in front of us if we fall. They are, therefore, particularly exposed. Our goal is to reduce the risk of specific injuries related to motorcycle riding.

FITTING – because gloves form the link between you and your motorcycle. To truly savor piloting your motorcycle, this connection should be seamless, allowing for perfect responsiveness each time you touch the controls, whether you're accelerating, braking, or changing direction. Feeling every move at the controls (and, by extension, every movement of your motorcycle) is essential. It's even further proof of safety. And this should happen with a certain amount of comfort. Our desire is clearly to enhance the enjoyment you feel when riding your motorcycle.

DESIGN – because we consider a functional aesthetic to be especially important. In our view, the shape of each piece that makes up a glove stems from the role it plays in its use (protection, comfort, ventilation, abrasion resistance, etc.). This is why we design and craft each element independently, without using any standard pieces, so that a FIVE glove is exclusive and distinctive. Our designs are often imitated, but never equaled! So, you might as well choose the original, FIVE.

Our craft,
we are glove
specialists.

Hands have the particular complexity of being extremely sensitive parts of the body (sensitive to cold, heat, and collisions), highly exposed in case of a fall, and replete with a number of small, fully articulated elements (bones, tendons, muscles, blood vessels). More than anything, it's through our hands that we experience one of our five senses, the sense of touch. In other words, the very least element of a glove that's badly designed or wrongly placed is immediately uncomfortable. A badly fitting glove or one that's not right for your body type or riding style can considerably diminish your riding pleasure, or even ruin what promised to be a great ride, because your attention would be focused on the discomfort rather than the beauty of the landscapes you're experiencing. A glove should therefore perfectly mold to the curves of your hand as it grips the handlebars and controls and allow for total freedom of movement of each and every joint. This is why our gloves are pre-shaped and why we take care to perfectly position protective elements, just as we do those that enable joint movement.

As you can see, you can't just design a pair of gloves like you do a piece of clothing. The glove is not just a simple extension of your jacket, contrary to what non-specialist brands may lead you to believe. In terms of gloves, the approach has to be even more technical, due to the small size of the pieces assembled, their number, and the freedom of movement of the hand that is hard to obtain, yet indispensable. Because, by definition, layering levels of fabric and protective elements can swiftly end up hindering the mobility of the hand, if real expertise isn't used. This is why we've made the choice to become THE Glove Specialist, because we believe in the virtues of specialization and expertise. It's hard to imagine how complex designing an effective, high-performance glove can be. Designing an "aesthetically pleasing" glove, like many brands do, is relatively easy. Creating a glove that's functional and both elegant, comfortable, and protective, no matter the size, and for mass production, presents a whole other challenge. This is our vocation. We're no cleverer, nor more intelligent, than general gear providers. We want to offer gloves that are far better than average, because that's all we make. We dedicate all our efforts and endless hours, day after day, with each passing month and every year, to just one product: gloves! And this is how we can keep developing our expertise and constantly improving the quality of our products.

A FIVE glove
frequently offers just
that much more.

Beyond the idea of comfort and perfect fit, a FIVE glove often offers so much more than competitors' gloves, if you truly look at the details. It's not necessarily obvious when you purchase them, but this makes a huge difference when you wear and use them, in terms of comfort, the level of protection, and durability. When you compare the materials that make up FIVE gloves from the rest of what's out there on the market, you'll see that, compared to products that are "supposedly comparable" (in terms of price, for example), FIVE frequently offers so much more. From authentic, full-grain leather, when competitors are offering synthetic leather...to real Carbon, when others only offer basic plastic with a carbon look...to Kevlar® lining, when other manufacturers offer no reinforced lining. And then, there's the external stitching, which offers greater comfort but is harder to make, as opposed to standard seams, etc. Our motto: offering the best possible product at the best possible price. The qualities of a FIVE glove can truly be appreciated once it's worn, even more than in-shop.

*Using the finest
components and materials:
this is the FIVE hallmark.*

We utilize optimal technology in our products, which leads us to select renowned technical partners, such as GORE-TEX® (weatherproof membrane), Primaloft®, and Dupont de Nemours® (Kevlar®) Gütermann® (for threads that are durable, yet don't cut into the skin), and adopt their innovations for our most advanced products. For example, we were the first to use Nanofront®, an absorbent, non-slip material from Japan, on the palm of our high-end motocross glove, for peerless grip.

*We're not content to simply design
our products, we make them
in our own partner factories.*

Our technicians and colleagues are on site to make sure that each glove that emerges from our production lines is consistent with the initial guidelines set forth by our R&D department in France and our technical lab in Italy, which has developed expertise in gloves over several generations and ensures that our patterns (and our gloves) are in perfect working order...from the smallest to the very largest sizes!

Our gloves are designed to cover the hand, but they are also "hand" made, by expert workers and seamstresses. Making a glove requires a considerable number of manual steps, whether it's making pieces of the protective elements, cutting, embellishing, assembling, or sewing the elements that compose it. These workers handle the fabrics and rigid pieces and assemble them using a "plain old" sewing machine, with almost unbelievable dexterity. One of the essential aspects of the comfort and proper fit of a glove is the attention given to its assembly. At FIVE, our precision standard in terms of the stitches assembling the fingers, for example, is two times more precise than standard practices in the industry. This lower tolerance for gaps in the alignment of stitches creates an extra constraint for our workers and requires them to be particularly attentive. Nevertheless, it is absolutely essential for a perfect fit, and this is one of the keys to FIVE's expertise.

Producing in our partner factories allows us to maintain perfect control over our output, including in quality management. It is precisely because our gloves are assembled by human beings, and not by robots (which would be unable to copy the movements of a seamstress), that sometimes a slight gap identified at the moment of assembly creates the need for stitching that may loosen over time. This remains an exception and affects less than 1% of our total output (0.6%, to be exact), a level well below industry averages. We are proud of this low rate (zero errors simply does not exist) and take responsibility for it, to the advantage of our clients, with Premium product support through our international sales network, in order to provide total satisfaction to users of FIVE gloves.

The development of FIVE gloves is based on real feedback.

It's in collaborating with top-level riders and listening to the needs of and feedback from thousands of users throughout the world that we are able to develop ever more comfortable and protective gloves. We test our gloves under the extreme conditions offered by top-level competition, before we bring them to market. And the innovations we decide to use for racing benefits the amateur products in our range. Our official riders take part in MotoGP, Moto3, Superbike, Supersport, Endurance, Supermoto, Motocross, and Enduro world championships... They wear FIVE gloves on racetracks throughout the world and actively contribute to the evolution of our products. And so, when Michele PIRRO took a spill at over 300 kms/h at Mugello in 2018, and got up without a scratch on his hands, we were truly happy and proud to be his equipment partner. Unwittingly, he helped us study how our gloves perform in a real-life situation, well beyond any tests we carry out in a lab. In the same way, when Peter HICKMAN won the Isle of Man Tourist Trophy (the fastest and undoubtedly most dangerous road race in the world) - setting the average speed record at 136 mph, when Dominique AEGERTER becomes double Supersport World Champion in 2021 and 2022, when team YART becomes 2023 Endurance World Champion and 2024 vice-champion, when Thomas CHAREYRE was crowned 8-time Supermoto World Champion, or Steve HOLCOMBE took several Enduro World Championship titles, all of them wearing FIVE gloves, we can't help thinking that our products do, in fact, deliver the goods for the most demanding riders and athletes. Though riders are at the very heart of our product development strategy, it's also a matter of passion. Because all of us at FIVE share a love affair with motor sports. In fact, we have several former professional riders now working for us at the office, and we feel blessed to share great friendships with a number of champions, who have worn or still wear our gloves. We're always proud to see our official riders raising up their trophies and breaking out the champagne on the podium, wearing FIVE gloves, a sign that these gloves have truly done their job during the race. ;) But, above all, we design and make our gloves for our clients. For you, who ride every day or simply for pleasure. Thus, we always listen to you and want to have your feedback on our products, so we can learn from experience and ensure that future generations of our gloves include all these evolutions.

Thanks to all of you, who choose to ride in FIVE gloves ;)

Make the right choice in gloves.

To choose the right glove for you, several factors come into play. The type of motorcycle you're riding. The season you'll be using it in (Should it be ventilated? Does it need to be heated?). The average distance you'll be covering. How often you'll be using it. The level of protection and comfort required. Your budget. Though, in theory, the more a glove protects, the less comfortable it is, our entire job at FIVE is about flipping this equation and making an ultra-protective glove truly comfortable...and vice-versa. Obviously, no glove can totally protect you in case of an accident. That being said, FIVE gloves are designed to limit the risks of injury and meet CE Moto standards (with the corresponding label sewn inside, which features the Moto icon required in certain countries) on 3 different levels: CE (gloves without protective shells), CE KP1 (gloves with protective shells, providing an adequate level of protection), and CE KP2 (gloves with protective shells, providing a superior level of protection). We think that each type of motorcycle and rider deserves a specifically adapted glove. But this hasn't stopped us from offering certain multipurpose, cross-category products. This is the purpose of this catalogue, where you can discover our products, down to every last detail. They are categorized according to different product groups: Racing, Street, Urban, Custom, Adventure, Winter, Heating Technology, Woman, and Off-Road, from the top-level product to the most affordable one. And you'll find the summary of our collection at the end of the catalogue, to provide you with a full overview in a flash. Choosing a FIVE glove shows a certain pragmatic spirit: You want the best possible glove for riding your motorcycle, and you know that you'll find it among the 101 styles that make up our 20th anniversary 2025 collection! THE perfect glove for you does, in fact, exist in the pages of this catalogue. Now we'll let you sit back and discover which one is yours, and, especially, encourage you to try it on at one of our many FIVE OFFICIAL DEALERS all over the planet (with whom we share our experience and real solutions to make the most of their glove selection), before you undoubtedly slip it on and enjoy a ride with it.

20 YEARS...

20 FIVE riders.

FIVE is celebrating its 20th anniversary in 2025! We could have presented 20 glove styles that mattered, but our passion for sport is a fundamental part of our brand's identity. And so, reflected in the careers of 20 riders*, we look back at 20 years dedicated to the pleasure of riding...and winning.

It was just before the start of 2005. The founder of FIVE, a former amateur Enduro rider with a passion for motorsport and business, had already successfully contributed to the major equipment makers setting up shop in France. A desire to work "for himself" rather than for others and to broaden his experience to the rest of the world led him to create his own brand **.

Confident that there was a way to enhance motorcycle gloves' level of comfort and safety by focusing on the matter and becoming THE specialist in this field, he created FIVE Gloves, with product quality as his absolute priority: They had to add to the joy of riding and the safety of their rider! The brand was launched in 2005 with a truly international vision and approach right from the start.

Out of passion, at least as much as to promote his products, he made the top tier of competitive riding an essential part of the FIVE development process. These riders expect nothing less than the best; they tasked the brand with giving it to them, and then shared their feedback on the product for the end consumer, for continuous improvement.

From the beginning, the brand focused on young Boris CHAMBON, who would bring FIVE its very first world title in Supermoto, right from its first year of existence in 2005. Many successes would follow in both the sporting and commercial domains.

The riders who are FIVE athletes or ambassadors are all selected based on the human-centered and sporting values that the brand shares. They are usually the ones who approach us, wanting to use the best possible gloves in their quest for victory. And a simple handshake has long been enough to seal the partnerships established between FIVE and its riders. Many of these partnerships would last for years.

FIVE has now been around for 20 years. And so, here are 20 exceptional champions, listed by more-or-less chronological order (and not by order of importance), who have made their mark, or who still matter in the history of FIVE Advanced Gloves.

* Many other riders have participated in and contributed to the adventure that is FIVE, but it seemed impossible to us to mention all of them here. Nevertheless, they hold just as much of a special place in our hearts. Thank you all!

** The founder of FIVE sold the brand to the DC Expansion group in 2019, which has pursued the adventure by keeping all the original staff and riders.

TWENTY YEARS TWENTY FIVE RIDERS

Andréa DOVIZIOSO – RFX1
Photographed in 2009

01_ Boris CHAMBON

The very first FIVE rider, 2005 Supermoto World Champion.

Boris was the very first official FIVE rider. He would win the Supermoto World Championship title at the controls of his official KTM in 2005, equipped with SF1 gloves, which were not nearly as sophisticated and comfortable as they are today. He participated in the development of the first FIVE series of gloves and still contributes to their evolution today since he's in charge of CE certification for the brand, whose team he joined when he retired from his professional career. He's also the point man for our official riders, with whom he interacts on an equal footing.

02_ Stéphane CHAMBON

An eclectic rider and partner.

Following on the heels of his younger brother Boris, Steph joined FIVE as an official rider. As a friend of our founder, he would take part in the adventure by spending a certain period with us as a partner and associate. Considered an Artist of the controls (with a big "A"), he distinguished himself as a Supermoto rider, a winner of multiple Guidon d'Or awards, then world speed champion in the Supersport category, and a winner of the 24 Hours of Le Mans. Though smaller in stature, Steph is a giant in terms of talent and kindness.

03_ Stéphane PETERHANSEL

Mister Dakar!

Stéphane can be considered a friend of FIVE and its founder from the very start. Without the actual FIVE "official" status during his career, he has loved wearing FIVE gloves for years now on his motorcycle jaunts, the way he likes it, at the controls of his Yamaha. A record-holder for Dakar Rally victories in both the motorcycle and automotive categories and an Enduro World Champion, Stéphane PETERHANSEL is a legend in motorsports who needs no introduction. He has access to as many different FIVE gloves as he wants...for life!

04_ Andréa DOVIZIOSO

MotoGP Rider / 1st career victory in Donington (UK) in MotoGP on July 26, 2009 with FIVE gloves.

Andréa DOVIZIOSO marked FIVE's entry into the world of MotoGP. As a promising young rider for HONDA in this premier category, Andréa achieved the very first MotoGP victory in his career in England on the Donington track on July 26, 2009, equipped with the first generation of the RFX1, our most popular racing glove, which he had helped bring to life. "Dovi" would go on to become one of the most celebrated stars in MotoGP, winning several world vice-champion titles. Our cooperation lasted 6 years between 2007 and 2012.

05_ Jean-Michel BAYLE

A motorsports legend.

Jean-Michel BAYLE, or "JMB 111", may be considered the most eclectic rider in the history of motorsports, a dominant figure or participant among the elite of disciplines as varied as supercross, speed Grand Prix, or endurance. Once a World Champion, then U.S. Champion in motocross and supercross, throughout a stunning career, he started from scratch to become one of the top names in world road racing at Grand Prix 500cc (currently MotoGP) level, then in endurance (Winner of the Bol d'Or and the 24 Hours of Le Mans). An accomplished rider on both dirt and asphalt, he's been an ambassador for Honda and for FIVE for several years now and marvelously embodies the spirit of our Trail Adventure collection.

06_ Fabio QUARTARARO

CEV Moto 3 Champion with FIVE, and future MotoGP World Champion.

Fabio wore FIVE gloves throughout his younger years in competition until he won the Spanish Championship in CEV Moto3 and distinguished himself by securing a place on the leaderboard of his very first Moto3 World Championship in Texas, equipped with the RFX Race glove. Just for the record, it was FIVE's founder who recommended him, at the time, to the boss of his current equipment supplier for racing suits. The latter OK'd Fabio's choice to wear FIVE gloves with his suits until he reached the Moto2 category. And you know the next part: he would become a star and the first French MotoGP World Champion. Fabio has been a FIVE rider from his very young age until he reached Moto2 class in 2017.

07_ Thomas CHAREYRE

Mister Supermoto, 8x World Champion .

Thomas is a mainstay for our brand in the world of motorsports. He has won all of his 8 Supermoto World Championship titles equipped with FIVE gloves. So there's a long-standing collaboration between this rider and our brand, leading to many victories and titles, but also to the greater evolution of the SF1 style (launched by Boris CHAMBON), a short racing glove that's perfect for riding a Supermoto or a roadster. After his recent move from TM to Honda, he wanted to stay with FIVE until the end of his career, which was announced for the end of 2024, after 19 seasons wearing our gloves. Absolute longevity record.

08_ Peter HICKMAN

Multiple winner and speed record-setter at the TT on the Isle of Man.

The Tourist Trophy is rightfully considered the most spectacular and dangerous motorcycle race in the world. Contested on the back roads that cross through the villages on the Isle of Man (UK), riders take laps at full throttle, reaching crazy speeds amidst the hedgerows and houses. The speed record-setter (clocked in at 219.4 km/h – 136.358 mph) and multiple winner in various categories (Superstock TT, Superbike TT, Senior TT), Britain's Peter HICKMAN has chosen the most protective glove in the world, the FIVE RFX Race, for many years now. To triumph at the TT, you've got to have a lot of heart, real guts, and an absolute mastery of your craft. This is exactly what HICKY 60 has.

09_ Michele PIRRO

Ducati MotoGP rider, took a spill at 350 km/h at Mugello.

Michele PIRRO has been a FIVE rider in the MotoGP category for more than a decade. As a back-up and test rider for DUCATI, he participates in the development of the Italian motorcycles and has been in several Grand Prix as a Wild Card, equipped with RFX Race gloves. He particularly stood out, to his consternation, by experiencing a fall at over 350 km/h, in other words, the highest speed ever registered for a fall on the MotoGP circuit. It was on the track at Mugello (Italy) in 2018 when his front brakes froze up as he accelerated into the home stretch. He emerged badly bruised but without any injuries to his hands.

TWENTY YEARS TWENTY FIVE RIDERS

Fabio QUARTARARO – RFX Race
Photographed in 2015

10_ Steve HOLCOMBE

9x EnduroGP World Champion .

Steve HOLCOMBE is one of the most gifted and delightful riders of his generation. This British rider has won no less than 9 Enduro world championship titles (a series that's still underway). Equipped with FIVE gloves since 2018, he has directly contributed to the development of our range of Enduro gloves, which are specifically designed for this discipline.

11_ Loïc LARRIEU

2019 Enduro World Champion.

With seven national titles, 3 team world championship ISDE titles, and an individual world title in Enduro, Loïc LARRIEU is one of the best. Low-key in the rest of his life but tremendously committed and effective at the controls, Loïc is one of the faithful riders who've been working with FIVE for many seasons despite his change of Teams or category.

12_ Valentin GUILLOD

EMX2 2013 European Champion and World Top 10 MXGP rider.

Swiss rider Valentin GUILLOD and FIVE have had an understanding for over ten years. Valentin became European motocross champion while wearing FIVE gloves in 2013 before moving on to the MX2 world championship and reaching the top of the rankings. As part of Team HONDA SR since 2023, he's once again wearing FIVE gloves, this time the MXF1 EVO style, and is one of the top 10 riders in the world in the premium MXGP category.

13_ Zach PICHON

A new-gen Enduro champion.

Zach is the son of motocross champion Mickaël PICHON. He represents the new generation in the Enduro World Championships and features regularly on the podium in the E1 category. As Junior World Champion in 2022, he's proud of his MX roots and participates in the world championship wearing MXF Race gloves since he appreciates their precision. Zach is a well-rounded rider and an engaging young man, with an open and cheerful disposition inherited from his mom, enhanced with the spirit of a champion from his father. Zach PICHON will be changing teams in 2025 but will keep using his FIVE gloves.

14_ Dylan FERRANDIS

A FIVE rider in MX Grand Prix, then in US Supercross & Motocross.

In 2016, Dylan FERRANDIS, originally from Avignon, the town in the south of France where FIVE is based, participated in the MX2 world championships equipped with FIVE MXF PRORIDER gloves. He then left Europe for the U.S., and our collaboration had to be put on pause since his new Team had other commitments with a U.S. supplier. He would win 4 Championship titles in the U.S. in Supercross 250 and Motocross 250 & 450 on a Yamaha. His move to Honda in 2024 freed him up to start wearing FIVE gloves again. He now rides wearing the MXF Race, our new-gen motocross glove.

15_ Dominique AEGERTER

2x Supersport World Champion in 2021 & 2022.

Dominique AEGERTER won two titles as Supersport World Champion, equipped with FIVE RFX1 gloves. He also became World Champion of MotoE, the electric motorcycle category. This Swiss rider, who now competes in the world Superbike category, has been collaborating with FIVE for over five years. He has actively contributed to the development of the RFX1 style, which he prefers to the RFX Race, as well as to the execution of its natural evolution, the RFX1 EVO.

16_ Adrian HUERTAS

Leader of the 2024 Supersport World Championship.

This young Spanish rider, who is an official Ducati rider in the Supersport world championship, has, throughout this season, successfully tested our brand-new high-end Racing glove, the RFX1 EVO, and has worn it to the top of the leaderboard numerous times, thus offering him his first competitive victories even before his official launch scheduled for the end of 2024.

17_ Ana CARRASCO

First female world racing champion.

If women are the future of mankind, Ana CARRASCO holds a unique place in history. She became the first female world champion in the history of motorsports by winning the Supersport 300 title in 2018, beating all the men. She then participated in the Moto3 World Championship alongside the men and is currently chasing the 2024 Women's World Championship title, which has finally been created this year. For the past few seasons, she has been wearing our RFX1 Woman style and is contributing to the development of this version in real-time, high-speed situations.

TWENTY YEARS TWENTY FIVE RIDERS

Dylan FERRANDIS – MXF Prorider
Photographed in 2016

18_ Marc-Reiner SCHMIDT

2024 Supermoto World Champion.

Supermoto is FIVE's favorite discipline. The brand has won around fifteen world titles, the first of which was with Boris CHAMBON, and eight others with Thomas CHAREYRE. But whereas these two riders won while wearing short SF1 gloves, "MRS" prefers our new RFX1 EVO, a glove featuring a long cuff, to win in 2024. Whatever the case, this adds a star to the FIVE pantheon in Supermoto.

19_ Pauline FERRAND PRÉVOT

MTB XC . She has gold in the palm of her hands!

She doesn't ride motorcycles, but she's a real legend on two wheels. Because she shines behind the handlebars of her bicycle, Pauline FERRAND-PRÉVOT has been working with FIVE for at least four seasons now. Though she's a multiple World Champion on the road, gravel, and in cyclo-cross, it's in the cross-country mountain biking category that she has shown her strength, equipped with FIVE gloves, culminating in a Gold Medal at the 2024 Summer Games in Paris, where she moved the whole world with her tears as she was crowned champion.

20_ Tom PIDCOCK

MTB XC . A Gold Medal for an exceptional champion!

Britain's Tom PIDCOCK has made his mark in cross-country mountain biking while wearing FIVE gloves as the 2023 World Champion, then with another Gold Medal at the Paris Games, four years after his exploits in Tokyo. Tom loves mountain biking, though he also regularly excels in road racing, as a stage winner on the Tour de France at the summit of Alpe d'Huez. He has brought us one of the finest victories of these 2024 Summer Games, with a thrilling comeback after a flat tire, when he showed his truly British composure, confident as he was of his ultimate success.

OFF-ROAD

From MotoGP racing to everyday sport riding.

This range is the product of FIVE’s experience at the very highest level of international competition. Across all disciplines, MotoGP, Superbike, Supersport, and Endurance, gloves from the Racing range are designed for precision steering, both on the track and on the road*.

They offer riders guaranteed efficiency, high performance, and protection. Maybe you’ll never ride on a track, but what does it matter? Though some of our Racing gloves are clearly made for competition, others are more multi purpose in nature and will be perfect at the helm of your own machine for everyday riding... as long as you have that sport bike spirit.

Many famous riders have chosen FIVE gloves during their careers, and each of them has contributed to the development of the styles you’ll discover today. Some of the big names include: Andrea DOVIZIOSO, Stéphane CHAMBON, Fabio QUARTARARO, Peter HICKMAN, Dominique AEGERTER, Adrian HUERTAS and many others. With their help, we’re proud to present the most advanced Racing range that has ever been made for mass production.

The RACING collection includes three sub-categories: RACING Performance gloves are designed to perform on track and on road, offering different levels of protection, while RACING Sport gloves are designed more specifically for road sport use. RACING WP models are waterproof gloves allowing to ride a sport bike on road to stay dry when it rains.

** Piloting a sport bike involves risk. FIVE gloves that are CE-certified, CE KP1 or CE KP2, are designed to reduce the effects of a fall; nevertheless, no glove can completely prevent the risk of injury. Ride safely!*

The future
of Racing gloves.
More than just
an evolution,
it's a revolution!

More than just an evolution, it's a revolution! Our most popular racing glove stays ahead of the pack with this new-gen design. It redefines performance standards by offering unprecedented comfort and precision.

Used successfully on the track on the hands of two-time Supersport World Champion Domi AEGERTER in 2021 and 2022, the RFX1 has excelled at the highest level. Now, it has been replaced by the RFX1 EVO after two years of intensive development alongside our official World Championship Supersport and Endurance riders.

This new version is more modern, comfortable, and high-performance, with a focus on brand-new

breathable micro-Bemberg fabric that's integrated into the palm). Metacarpals are also protected on their upper section through a honeycombed TPU element that limits the effects of any impact.

On the track, precision at the controls is essential, but it also needs to be accompanied by top-flight palm protection in case of contact with the asphalt. The RFX1 EVO is the perfect combination of these elements, with its multilayered assembly of soft elements that are highly abrasion-resistant, layering full-grain leather over Kevlar®, 3 millimeters of foam, and Superfabric®, as well as an ERGO PROTECH® honeycombed slider shell on the hypothenar. It passes level 2 CE certification tests with flying colors. Particular attention has also

RFX¹ EVO

construction and new components. Its topside construction combines calf leather with Stretch Kevlar®, and its palm, made of ultra-supple goat leather, offers unparalleled comfort and precision. The design of this new-gen Racing glove leaves nothing to chance.

Each protective element is carefully designed and placed within the glove for unhindered, precise movement of the fingers, hand, and wrist, starting with the new AirGo PROTECH™ shells. Inspired by helmet technology, they include an outer rigid shell for shock resistance and a soft inner honeycombed element to absorb energy from any impact and foster airflow, thus contributing to reducing the formation of blisters (as do the thin layer of

been paid to the glove's fit, and the zone around the wrist and forearm has been totally redesigned, including new materials that allow for greater maneuverability while offering superior support and protection.

With the RFX1 EVO, we're in the presence of a glove that will surprise you at every turn. With its design, but especially with its effectiveness and high precision, which the rider will undoubtedly feel at the controls. Designed for performance, it becomes discreet after just a few seconds, while it totally fulfills its role if you take a spill. To be convinced, all you have to do is try it: the RFX1 EVO is more than an evolution. It's a revolution.

RFX RACE

The most protective glove in the world thanks to its Carbon technology.

WHITE / FLUO YELLOW

The most advanced of all FIVE ADVANCED GLOVES™. Designed for high performance, the RFX Race offers the highest level of protection, due specifically to its triple shell in Thermoset Carbon Composite, a material used in aerospace and Formula 1.

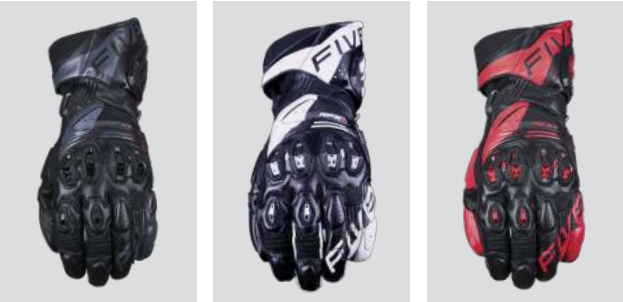

01. 160 assembled elements per pair / 159g of technology per glove (size M)
02. Full-grain cowhide construction (topside) for durability / Full-grain goatskin (palm) for suppleness
03. Ventilated TPU metacarpal-knuckle and metacarpal protective shells reinforced with Carbon Thermoset for high abrasion resistance
04. Protective Carbon palm slider shell
05. Palm reinforcement in digital leather
06. Thenar muscle (palm) reinforcement with a SuperFabric® patch
07. Internal Kevlar® lining
08. Outer stitching on the fingers (Gütermann thread)
09. TPU protective shell on the forearm
10. Stretch Kevlar® comfort panel (topside)
11. Dual closure system, with adjustment tab underneath a protective flap
12. Anti-twist accordion band between the ring and little fingers in order to limit the risk of fingers being pulled apart if you fall (a FIVE innovation)
13. CE KP2

SIZES. XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

RFX2

The perfect glove to get you started on track racing.

BLACK

BLACK / WHITE

FLUO YELLOW

Here's our most affordable glove to get you started racing on the track. It opts for components used in our superior designs (such as the cuff from the RFX Race), which lend it many qualities of a high-end glove, at a reasonable price.

01. Full-grain goatskin and Stretch Cordura® construction (topside) / Goatskin (palm), for extreme suppleness
02. Ventilated TPU protective metacarpo-phalangeal shells
03. Metacarpal reinforcements in 5mm-thick foam rubber
04. Synthetic leather palm reinforcement with a silicone print for grip on the handlebars
05. Stretch Cordura® comfort panels around the thumb and the ends of the index and middle fingers
06. Internal Kevlar® lining on the top of the hand and around the thumb
07. External stitching on the fingers (in Gütermann thread)
08. TPU hypothenar protective shell (palm slider)
09. TPU protective forearm shell (identical to the one used on the RFX Race)
10. Dual closure system, with an adjustment tab under a protective flap
11. Anti-twist accordion band between the ring and little fingers in order to limit the risk of fingers being pulled apart if you fall (a FIVE innovation)
12. CE KP2

SIZES . XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

RFX2 AIRFLOW

Ideal for riding a sport bike when temperatures rise.

BLACK

The RFX2 AIRFLOW is ideal for riding a sport bike on the road in the summer. It features all the technical characteristics of the RFX2 but in ventilated materials that favor airflow over the topside and on the palm of the hands.

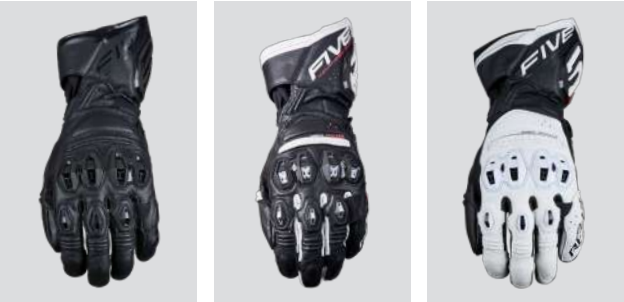

01. Perforated Full-grain goat-leather and mesh fabric construction, for ventilation (topside) / Goat leather on the palm side, for extreme suppleness
02. Ventilated TPU metacarpo-phalangeal protective shells
03. 5 mm-thick foam rubber metacarpal reinforcements
04. Synthetic leather palm reinforcement with silicone print for improved handlebar grip
05. Honeycombed 3D mesh panels around the thumbs and ends of the index and middle fingers
06. Internal Kevlar® lining on the topside of the hand
07. External stitching on the fingers (in Gütermann thread)
08. Hypothenar protective shell (palm slider) in TPR
09. Forearm protective shell in TPU (identical to the one used for the RFX Race)
10. Dual closure system, with adjustment tab underneath a protective flap
11. Anti-twist accordion band between the ring and little fingers in order to limit the risk of fingers being pulled apart if you fall (a FIVE innovation)
12. CE KP2

SIZES . XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

RFX3 EVO

Performance and versatility on the road and the track.

BLACK

BLACK / WHITE

WHITE

As the first design in the Racing range to use new-gen AirGo PROTECH™ Performance shells inspired by helmet technology, the RFX3 EVO is ultra-versatile and also proves to be as high-performance on the road as it is on the track.

01. Supple full-grain goat leather combined with synthetic leather topside construction
02. Supple full-grain goat leather palm
03. Perforated synthetic leather accordion to optimize the knuckle protector position
04. Ventilated AirGO PROTECH™ metacarpal-knuckle protector
05. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
06. TPR finger protection with air intake vent
07. Forearm protection from an ergonomic TPR shell (slider) integrated into the cuff
08. Dual closure system, with adjustment tab underneath a protective flap
09. Anti-Twist accordion band between ring and pinky fingers to stop your fingers from being pulled apart if you fall (a FIVE innovation)
10. Hi-Res Grip™ palm reinforcement for optimal grip
11. Touch Screen™ system on index finger and thumb
12. CE KP1

SIZES . XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

RFX4 EVO

Versatility and sportiness.

A sport glove with a classic look and ERGO PROTECH™ semi-soft shells featured in our urban or trail gloves. It can be used on so many different machines, when you want to combine comfort, safety, and a sporty feel.

RFX SPORT AIRFLOW

The sport glove...for a breath of fresh air.

BLACK

For a breath of fresh air while riding when the mercury rises, the RFX SPORT AIRFLOW favors ventilation and offers a solid level of protection on the road, with its leather construction, long cuff, and protective shells.

- 01. Full-grain goatskin construction (topside and palm) for extreme suppleness (perforated for ventilation) and vented mesh fabric
- 02. PVC metacarpo-phalangeal protective shells under leather
- 03. Stretch comfort gusset over the wrists
- 04. External stitching on the fingers
- 05. Palm and ring and little finger reinforcements in synthetic leather
- 06. TPR hypothenar protective shell (palm slider)
- 07. Dual closure system with an adjustment tab under a protective flap
- 08. Forearm protection from foam reinforcement under leather
- 09. Index, middle, little finger and thumb knuckle protection from foam under leather
- 10. Reflective night-time visibility panel
- 11. CE KP1

SIZES. XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

RFX WP

The performance-oriented weatherproof glove with a carbon shell.

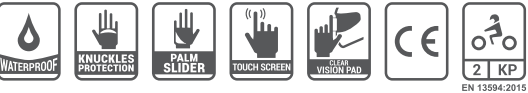

BLACK / FLUO YELLOW

Because you can appreciate riding a sport bike when it's raining, the RFX WP relies on its carbon shell and TPU wrist strap to protect its rider in case of a fall, and its weatherproof/breathable 5_DRYTECH™ membrane in case of bad weather.

01. Topside: Full-grain goat-leather and Cat Eye™ fabric construction / Palm: Goat leather for extreme suppleness / PU digital palm and thumb reinforcement for grip / Water-repellent stretch fabric
02. 5_DRYTECH™ breathable, weatherproof membrane, partially bonded to the glove on the palm side
03. Semi-rigid TPU Racing Cuff, emulating the RFX Race style
04. ERGO PROTECH® one-piece carbon protective shell
05. Mini-protective shells in soft TPE and comfort gussets on the index and middle fingers
06. Hypothenar protective shell (palm slider) in TPR
07. 3 mm foam reinforcement underneath the leather at the thenar and on the thumbs
08. Outside seaming on the fingers
09. Reflective elements on the index and middle fingers and cuff
10. Dual closure system on the wrist and adjustable cuff with a velcro tab
11. Internal Bemberg™ comfort lining
12. Anti-twist accordion band between the ring and little fingers so your fingers don't get pulled apart if you fall (a FIVE innovation)
13. Clear Vision Pad™ visor cleaning system on the left-hand side
14. Touch Screen™ system on index finger
15. CE KP2

SIZES . XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

RFX4 EVO WP

The versatile weatherproof sport glove with a honeycombed shell.

BLACK / FLUO RED

For sporty rides in rainy weather, the RFX4 EVO WP stands apart with its versatility and overall flexibility. Though it's designed for sport bikes, it may easily catch the eye of powerful scooter or roadster riders.

01. Softshell fabric and synthetic leather topside construction
02. Supple full-grain goat leather palm
03. Ultra-tough stretch Nylon fourchettes between fingers
04. New design and Softshell thumb construction for optimal fineness and comfort
05. 5_DRYTECH™ breathable, weatherproof membrane, partially bonded
06. Nash palm reinforcement
07. ERGO PROTECH® metacarpal-knuckle protective, semi-soft honeycombed shell
08. ERGO PROTECH® soft TPR protective shell on hypothenar (palm slider)
09. TPR finger protection on index and middle fingers
10. Forearm protection from 3D TPR logo
11. Dual closure system with adjustment tab underneath a protective flap
12. Reflective fabric on pinky finger
13. PU Grip Palm reinforcement
14. Touch Screen™ system on index finger
15. Clear Vision Pad™ on the left hand for wiping helmet visor or goggles
16. CE KP1

SIZES . XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

OFF-ROAD

For everyday riding that's fun and dynamic.

The STREET collection is made for those who ride over short-to-medium distances in the city or outside of it, taking a fun and dynamic approach that needs protective gloves for maximum riding pleasure (and safety) at the controls. The street is their natural domain, but their field of play may be even greater... Just as comfortable in town and around its outer edges for quick trips as they are on side roads out to explore, and even on the track, for the high-performance fans among them.

Proud owners of roadsters, supermotos, or maxi-scooters will naturally gravitate toward the STREET Performance category, for gloves inspired by our competition styles, recognizable by their protective shells in sleek shapes and leather palms, which offer a superior level of safety that's sure to satisfy the most demanding technical riders. These gloves include the SF series, crowned with 14 Supermoto World Championship trophies, alongside the SF1, which could be described as a "short Racing glove" that's ideal for track riding, or the new-gen STUNT, an iconic style from the brand, designed to conquer the city...frequently emulated, but never equaled!

The STREET Sport segment brings together our textile or combined leather-and-textile gloves, whose protective shells with softer styling have become more subtle and discreet. These are for riders who take on the streets and roads in a multitude of ways (from motorcycles to scooters, and pocket bikes to big beasts, along with new electric mobility solutions...), ensuring their comfort and safety and attempting to keep a look that's both modern and sporty.

The STREET-WP segment includes gloves featuring a breathable, weatherproof membrane, commonly known as "mid-season" gloves, essential for worry-free rides as soon as the weather takes a turn for the worse (cold air, wind, moisture...).

P.S. : Take a look at the new, standalone URBAN collection (now distinct from the STREET collection), offering a more classic, fashion and urban-oriented style, which you'll find in the next few pages.

Thibaut "Mr Nogues" NOGUES - SF1 EVO
Pro Sportbike Freestyler

The short,
high-performance
glove for roadsters,
sportbikes
and supermoto
bikes.

The SF1 EVO is the “short” version of the RFX1 EVO (Racing). Designed for hard-core riding, it offers all the characteristics of a high-performance glove, without the bulk. It’s a worthy successor to the SF1 and its 14 S1 World Championship titles.

The SF1 is known as the ultimate “short racing glove,” perfect for riding roadsters, sport bikes, and supermotos. Today, it makes way for the SF1 EVO, for what turns out to be more than just a simple evolution. The SF1’s creation was originally driven by a straightforward concept: offering the best possible glove to our official Supermoto riders. In

superior to natural leather in terms of abrasion and tensile resistance, and an ultra-supple goat leather palm for the most precise and comfortable feel at the controls.

At the controls of a super-powerful roadster, precision is essential, but you also need high-level protection. Each protective element is therefore meticulously designed and placed within the glove, starting with the new AirGo PROTECH™ shells. Inspired by helmet technology, these include an outer rigid shell for shock resistance and a soft inner honeycombed shell to absorb any impact and favor airflow. Metacarpals are also protected

Thibaut “Mr Nogues” NOGUES - SF1 EVO
Pro Sportbike Freestyler

SF1 EVO

other words, a glove that echoed the characteristics of our best track gloves but with a short cuff for greater maneuverability on the dirt sections. The result was the SF1 winning no less than 14 Supermoto World Championship titles, 8 of which came at the hands of Thomas CHAREYRE! But the specs of this model attracted riders well beyond this discipline, making it the perfect glove for many sport bike enthusiasts, whether their bikes are faired or not. They appreciated its compact size, streamlined design, robustness, and, lastly, its performance-oriented character.

Logically enough, the design of the SF1 EVO is part of our new generation of Racing gloves, notably the RFX1 EVO, whose overall look it emulates, at least from the fingers to the wrist section. It combines topside construction in Syntech Skin™, a modern material that offers characteristics

on their upper section with a honeycombed TPU element that limits the damage in case of a fall. The palm also retains the honeycombed ERGO PROTECH® shell. The wrist and forearm are protected by a brand-new TPR Cuff Slider™.

Like a roadster that retains only essential features, the SF1 EVO, through its shortened cuff design, offers its rider just what they need for a high-performance glove. It’s sure to delight riders who love to push it to the limit, but want to manage their risks in case of a fall, while they savor their riding pleasure to the max.

Thibaut "Mr Nogues" NOGUES - STUNT EVO LEATHER
Pro Sportbike Freestyler

STUNT

EVO 2

Inspired by helmet technology,
the concept invented by Five
is now reinvented.

Behind the creation of the STUNT by FIVE was a powerful idea: offering a short, sport-style glove for riding in urban & suburban zones that would be as protective as a track glove, and as lightweight and comfortable as a motocross glove. The STUNT succeeded in fulfilling this mission by adopting stretch elements in its topside construction and featuring sleekly designed protective shells and a leather palm that included a slider-type protective shell.

Though FIVE invented the STUNT, which helped make our brand a success throughout the world, this concept was then frequently copied...but never equaled. After the original STUNT came the STUNT EVO. Now, FIVE stays a step ahead once again with the third generation of this glove, the STUNT EVO2.

New exclusive design Airgo Protech shells.

Even more comfortable and protective than its predecessors, the STUNT EVO2 and its different iterations use the latest generation of AirGO PROTECH™ Performance ergonomic protective shells. Created by the Design and R&D departments at FIVE, their design is trademarked and protected. Their construction is now inspired by helmet technology, combining the benefits of a hard external shell with the advantages of soft internal elements that channel airflow. Like the hard shell of a helmet, the rigid outer shell protects you from the impact of a fall. And the internal soft element absorbs and diffuses the energy of any impact, as the internal EPS liner on a helmet would do. Its honeycombed structure, which includes multiple openings, promotes optimal airflow (as would the holes and channels in a helmet's EPS inner liner).

On most gloves, foam of varying thickness is placed underneath the rigid plastic shells (even ventilated ones...), to make the contact zones between the glove and the hand more comfortable. What happens is that the foam tends to obstruct airflow. No such thing is happening with the STUNT EVO2, because its ergonomic shape and the softness of the internal AirGO PROTECH™ element means that no comfort foam is needed. Only a thin lining allows the air to filter through, thus ensuring a comfortable junction between the skin and the soft protective element that molds to the natural contours of the hand. The comparison with the world of helmets goes even further, because we've also produced 3 different shell sizes to cover the various (glove) sizes we offer. It's the same as for major helmet makers, except that we've doubled down by producing 3 sizes of right-hand shells and 3 sizes of left-hand shells... ;)

These shells are solid enough to earn a level 2 protective designation in and of themselves according to the CE standard, in other words, the highest level.

A 100% full-grain leather palm for extreme suppleness.

By choosing a 100% full-grain goat leather palm, renowned for its extreme suppleness, and a semi-soft, honeycombed ERGO PROTECH® palm slider, the STUNT EVO2 offers unparalleled feel on the handlebars. And thanks to its topside construction in stretch Twill Span, the second-skin effect offered by the STUNT EVO2 is simply stunning.

This glove's fit is impeccable, with its velcro tab that's integrated into the very structure of the wristband. And finally, the dual Touch Screen™ system allows you to handle all your device screens without taking off your glove. Located on the thumb and index finger, it makes using your smartphone's camera function or the zoom feature of your GPS so much easier. Offered in a range of bright, solid colors, such as red and neon yellow, or a camo version, the boldest (or most fashion-conscious) riders will proudly pair it with their everyday looks, like those brand-name sneakers that everyone notices.

STUNT EVO2, STUNT EVO2 LEATHER VENTED, and STUNT EVO2 AIRFLOW are the worthy heirs to the original STUNT...but now they're entering a whole new dimension!

Urban riding with elegance.

The URBAN collection is made for those who ride two-wheeled vehicles in urban or suburban settings and are looking for a certain elegance that also combines protection, practicality, and a pared-down aesthetic.

The styles that are part of this collection are meant to enhance your riding experience, focusing on natural materials such as full-grain leather, or taking maximum advantage of modern technical fibers. They're also protective, with ergonomic shells discreetly integrated into the structure of the glove and concealed beneath the leather or fabric, for resolutely urban flair.

The goal here is to make your gloves blend in with your everyday looks when heading out in the city, to the office, or to a meeting. These gloves come in muted shades such as black, grey, brown, or khaki... They can be worn to pilot a scooter or a motorcycle, so long as your priorities are comfort, an enhanced ride, and, of course, style!

Though they may have a conventional look, these styles are infused with all of FIVE's expertise in terms of safety and perfect fit, as well as the latest innovations introduced by the brand for better riding (Touch Screen™, Pull'N'Ride™, etc...).

The URBAN WP collection is comprised of gloves featuring a breathable, waterproof membrane, and, in some cases, thermal insulation, so you can run around town with peace of mind when the weather is rainy or cold...and always with total elegance.

SPARK WP BLACK

SPORTINESS AND ELEGANCE
FOR THE URBAN ENVIRONMENT...
IN THE RAIN

The SPARK WP combines urban elegance and sportiness with waterproofness. Featuring the protective qualities of the SPARK, inherited from sportier designs, it's nicely enhanced, in this WP version, with a 5_DRYTECH™ breathable/weatherproof membrane.

As the waterproof version of our SPARK style, which has been a real success for the summer season, the SPARK WP is the ideal glove for when it might rain, or even when it's pouring, or

full-grain leather palm hosts a helpful soft slider shell that will protect its rider in case of unexpected contact with the ground. The rest of the time, it knows how to stay discreet and won't cause even the slightest discomfort at the controls. The SPARK WP is, therefore, truly reassuring, in addition to being comfortable.

It's also practical: Equipped with the Touch Screen™ system on the thumb and index finger, it allows you to zoom in on your smartphone or

SPARK WP

simply when temperatures are cooling down. It includes a waterproof/breathable 5_DRYTECH™ membrane, which is partially bonded to the palm for impeccable grip, allowing you to ride dry, even when it's raining cats and dogs...As long as you've slipped the cuff of your waterproof jacket over it, of course. It represents a first-rate choice for those who want a comfortable and elegant waterproof glove that features exciting characteristics inspired by sportier styles. Because though it's clearly designed for urban use, it includes a honeycombed ERGO PROTECH® metacarpal protective shell. The SPARK WP seeks to be discreet; this means that it's all concealed underneath elegant, laminated fabric that raindrops will simply slide across...

The city is full of traps and slippery streets, especially in the autumn. So, since we tend to put our hands out in front of us if we fall, the SPARK WP's

GPS touchscreen using two fingers. It's just what you need to find your way through the heart of the city. Slipping the glove on is made even easier than before with the addition of a Lycra® insert underneath the Velcro® adjustment tab. This is a truly handy detail when you need to put on or take off your gloves often as you zip across the urban landscape from one meeting to another.

The SPARK WP is designed to be your everyday partner in nearly any kind of weather, as long as temperatures aren't in total freefall. Since it also serves as a windbreaker, it's particularly effective as a mid-season glove, when a summer glove would be too lightweight and a winter one, too bulky. It may even give you a little jolt: the feeling of enjoyment when you're riding your bike in total freedom while you (why not?) sing in the rain!

Custom is about loving **things** made **just for you.**

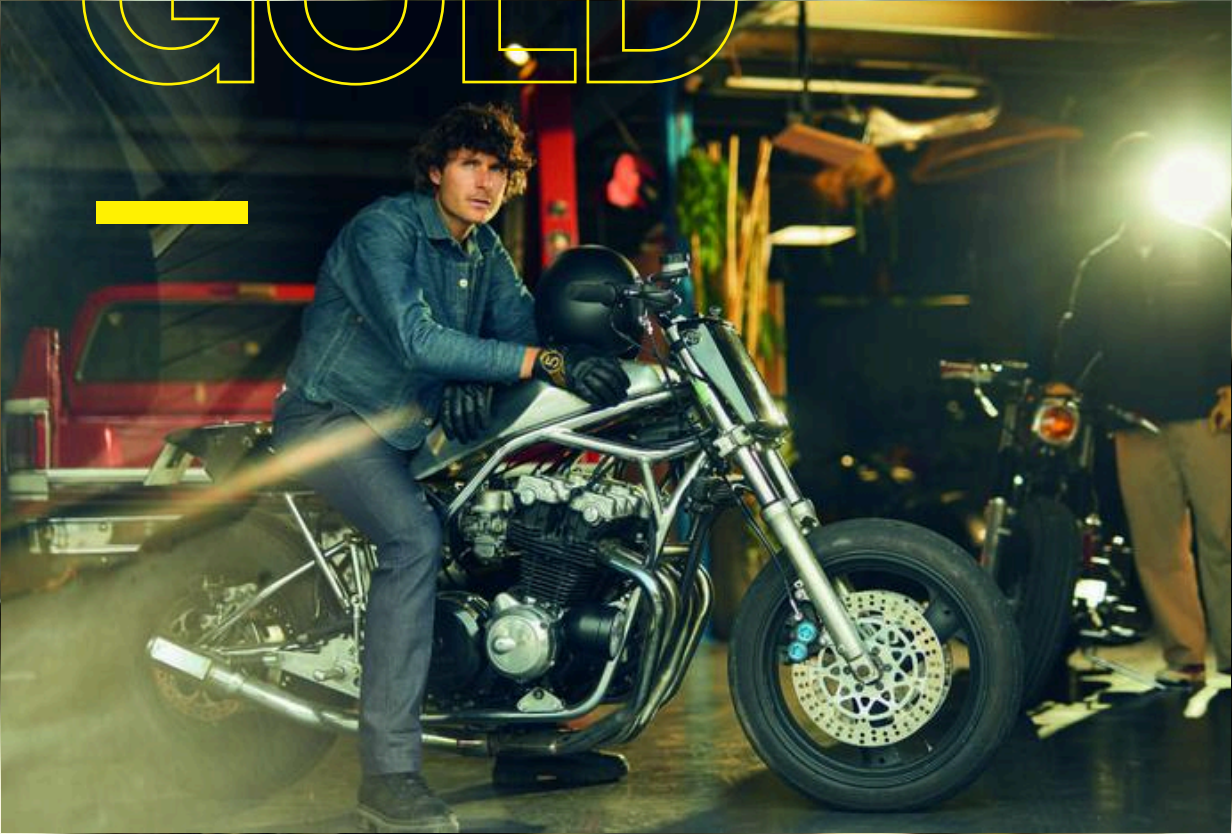

Custom culture is the idea of finding that special something made just for you. So, it was logical that FIVE would create a collection of gloves aimed at enthusiasts of custom, vintage and new-retro motorcycles, depending on what you prefer to call it.

This is a range where you'll find the glove that matches the style of the motorbike. Beautiful design, high-quality, authentic materials, mainly full-grain leather, chosen for its extreme flexibility and durability, all coupled with an excellent finish, are the hallmarks of the Custom collection. As glove specialists, FIVE offers lots more than normal custom gloves: it has poured all its expertise in terms of fit, comfort and safety into this Custom range.

The Texas has always gotten people talking... Like a misunderstood star, it was adored by the public and the press, but “industry professionals” set it aside a bit too quickly because they didn’t believe in it, contributing to its disappearance. Due to constant popular demand, we are now proud to announce the return of this style to the spotlight.

TEXAS EVO

And so, we present the Texas Evo, an evolved version that’s affordable, sure to please just about everyone, and be just as alluring as it ever was. Though it may look like a “golfer”, it’s actually inspired by the golden age of motorsports, when a few Hollywood stars took part in competitive races behind the wheel (or handlebars) of racing machines. In 100% ultra-supple cowhide leather with external stitching, we choose it for its lightweight comfort, its 5 patch that reminds us of a numberplate, its vintage look, and its irresistible colors. Despite its vintage look, it manages to keep up with the times, to the point of featuring the Touch Screen™ system on the index finger AND thumb, so you can make optimal use of your smartphone’s camera function. Nothing could be better for stylish, trend-conscious riders. So if you’re ready to play, bet on number 5. It’s sure to come up a winner.

THE CUSTOM GLOVE
THAT REFLECTS
ALL INFLUENCES.

OKLAHOMA BEIGE

The current “Custom craze” is being fed by several different styles (the Café Racer, Bobber, Vintage, and Neo-Retro trends, among others), which end up blending to create something truly interesting. And so, we wanted to offer a glove that everyone would like, whatever your favorite influence(s) may be. It’s up to you to write your own Oklahoma story...

OKLAHOMA

Café-racer fans who ride bikes inspired by '70s competitive motorcycles will appreciate the touch of racing-glove style: external stitching, a protective flap over the adjustment tab, protective cushioning over the knuckles. Those who favor Custom vintage machines, like a Harley with a rusty tank plate, are sure to like the large, visible topstitching around the piped edges of its short cuff, or its internal lining adorned with rather inspired custom graphics. For those Neo-Retro lovers who are used to combining modern comforts with all the charm of times past, they will undoubtedly notice the smooth, luxurious look of the cowhide, paired with the rough texture of nubuck, giving the Oklahoma its classic appeal. This glove stands at the crossroads of different trends, and, if there's one aspect that everyone can agree on, it's the level of protection it offers. So...is the Oklahoma authentic, protective, and truly universal? Definitely!

MONTANA

An authentic look for riding your custom bike when it's cold outside.

Inspired by 1930s flight jackets, MONTANA offers warmth and comfort with its supple calfskin leather and synthetic sheepskin lining. With its distinctive vintage style, it's perfect, soft, and cozy for riding a custom bike in the winter.

01. Tough, coated cowhide leather construction (topside and palm)
02. Synthetic sheepskin lining and 5_WARMTECH™ thermal insulation on the topside
03. Nubuck palm reinforcement
04. Adjustable cuff length with snaps
05. Embossed graphic ornament on the palm
06. Velcro wrist closure
07. Touch Screen™ system on index finger and thumb
08. CE Level 1

SIZES. XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

OKLAHOMA

The custom glove that reflects all influences.

The OKLAHOMA, reflecting many styles (café racer, bobber, custom), offers maximum protection and a timeless look with its cowhide leather construction and visible topstitching. Authentic and versatile, it appeals to many different riders.

01. Full-grain cowhide construction (palm and topside), for durability
02. Nubuck palm reinforcement
03. One-piece PVC metacarpo-phalangeal protective shell underneath the nubuck
04. External stitching on the fingers, for optimal fit
05. Protective foam knuckle reinforcements concealed underneath the leather
06. Comfort gussets on the wrist band
07. FIVE Custom logo embossed on the leather
08. Internal cuff lining enhanced with custom graphics
09. Decorative top-stitching around the piped cuff edges
10. Leather and velcro closure system and adjustment tab underneath a protective flap
11. "Feel your ride" inscription concealed underneath the protective flap
12. Touch Screen™ system on index finger
13. CE KP1

IOWA 66

The essence of a custom glove.

BLACK

The IOWA 66 embodies the essence of custom/vintage gloves, inspired by workman's gloves, but offering comfort and safety for motorcycle riding. Its full-grain cowhide leather combines suppleness, impeccable fit, and craftsmanship for optimal riding.

- 01. Full-grain cowhide construction (topside and palm) for durability, while offering major suppleness
- 02. Intentional patinated effect
- 03. External stitching on the fingers for enhanced comfort
- 04. 3 top-stitches on the metacarpals
- 05. Engraved FIVE Gloves Custom logo
- 06. Thumb construction that avoids wrinkling on the palm
- 07. Leather and velcro tab closure
- 08. CE Level 1

SIZES . XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

Explore the world without leaving your comfort zone.

The world is such a big place, and the planet is so beautiful, that it would be tempting to set off on a voyage to discover its many wonders. With some machines, you could easily gobble up the miles, on the asphalt or on dirt tracks, exploring every last nook and cranny of it.

Riding long-distance, through different lands and varied terrain, requires first-class equipment. Gloves from the TRAIL ADVENTURE collection prove to be as multifunctional, comfortable, and tough as the motorcycles made for extensive travel. These gloves offer unprecedented technical solutions that allow them to traverse big country, just as they can be effective for every day. Because you don't necessarily have to ride for thousands of miles (or kilometers) to fully enjoy the virtues of our TRAIL ADVENTURE gloves. Sometimes, adventure and escape start at the end of your street...or just in your head.

The ultimate
Trail-Adventure
glove to travel
long and far
in the heat.

TFX1 AIR- FLOW SHORT

The TFX1 AIRFLOW SHORT is designed for trail trips in the heat. It offers comfort, safety, robustness, and ventilation. Made from tough 3D mesh fabric and perforated goat leather, it includes an AirGO PROTECH® shell and Vibra-Less™ anti-vibration pads.

Our high-end Trail Adventure glove, the TFX1 GTX, has gotten people talking by winning the Best Rider's Equipment Trophy*; such are its characteristics and design, making it an essential item in the premium segment. And so, we've created a ventilated version designed for riding in the wide-open spaces in summertime. We therefore proudly present the TFX1 AIRFLOW. Shorter and more compact, it's constructed to offer comfort over long distances, safety on both dirt and asphalt, and optimum ventilation to make it pleasant to wear even when it's very hot outside.

And a new comfort element is making its debut in this style: VibraLess™ anti-vibration pads (a FIVE innovation) on the thumb and palm, which aim to absorb vibrations felt at high speed during off-road or uneven-surface tracks (damaged tarmac, gravel, rocky surfaces, etc.).

When you're racking up the miles at the controls, heavy with fuel, there's always a chance you could take a spill. Therefore, we're committed to ensuring that the TFX1 AIRFLOW is extremely protective, specifically on the palm, in case it makes contact with an abrasive surface such as rocks or asphalt. The most exposed and prominent zone on the hypothenar and thenar eminence features a wide SuperFabric® panel, a material made of epoxy resin, which is highly resistant to tearing and cuts while remaining extremely flexible.

Designed for comfortably racking up the miles at the controls of a big trail bike, it features a full-grain goat leather palm that is very supple and perforated to help perspiration evaporate. Its breathable comfort lining in Coolmax® fabric fosters airflow and helps you stay cool and dry for longer. Air penetration into the glove is maximized with the cover over the AirgoProtech™ metacarpal protective shell. This shell is made up of an outer rigid shell and a soft, honeycombed inner element, which also improves airflow. In short, everything is designed to limit perspiration as much as possible, as well as the risk of developing blisters. The elements that make up the fingers of the glove are put together with external stitching to enhance the feeling of comfort and precision at the controls.

Meticulously designed down to the last detail (with anti-twist ties, the Touch Screen™ system, a Clear Vision Pad, etc.) to be just as comfortable and effective on the road as it is on a dusty track as soon as temperatures rise, the TFX1 AIRFLOW forms the perfect duo with the TFX1 GTX, which is designed for cooler and wetter conditions. These two constitute the ultimate in Adventure gloves.

TFX1 GTX

The ultimate Trail-Adventure glove for exploring the globe.

The TFX1 GTX is engineered for long-distance trail trips. It offers comfort, safety, robustness, and watertightness. Made from water-repellent fabric and goat leather, it includes a GORE-TEX® Grip™ membrane and premium protection to face any weather conditions.

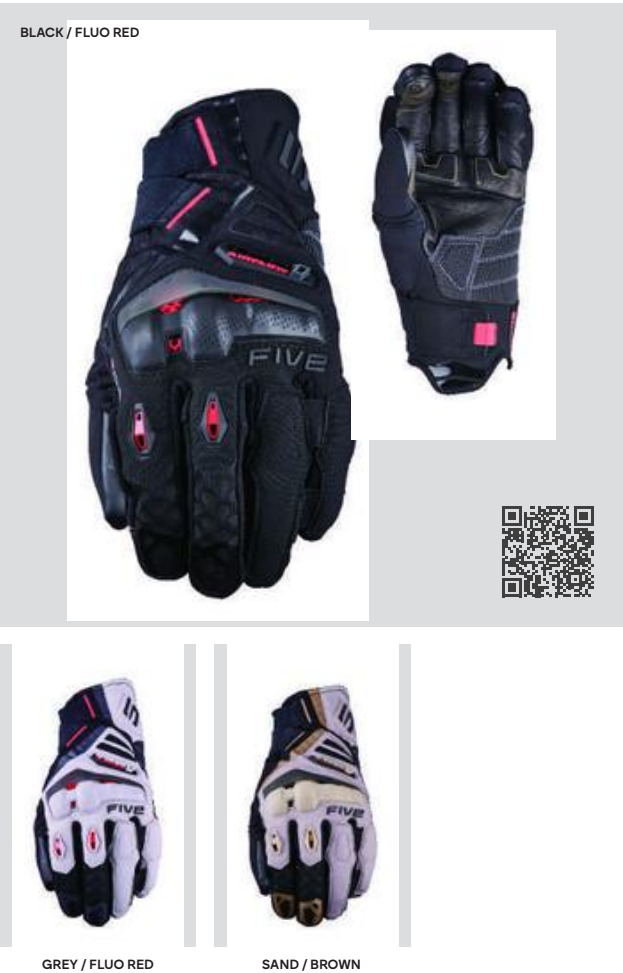

01. Topside: Water-repellent stretch and RipStop™ fabric construction for weatherproofing and comfort
02. Palm: full-grain goat leather for suppleness, and digitalized leather reinforcement at contact points for optimal grip in wet weather, and wide SuperFabric® protective reinforcement that covers the thenar eminence and the hypothenar
03. GORE-TEX® Grip™ breathable, weatherproof membrane molded to the lining on the palm side
04. ERGO PROTECH® one-piece metacarpo-phalangeal protective shell in soft TPR
05. Memory-foam and TPR reinforcement on the back of the hand
06. Phalangeal protective elements in soft TPR on the index and middle fingers
07. Forearm protection with a thick, semi-soft TPR 3D shell
08. Wide SuperFabric® reinforcement on the little and ring fingers
09. Anti-twist accordion strap between the little and ring fingers so your fingers don't get pulled apart if you fall (a FIVE innovation)
10. Comfort gusset on the index and middle-finger joints
11. Outside seaming on the fingers
12. Memory-foam reinforcements on the thumb and palm
13. Silicone print on the palm for improved grip
14. Inner lining featuring “map”-style silk-screened design
15. Stretch V-shape and velcro dual-construction closure system with gripper tab, one on the wrist and the other on the sleeve, for perfect fit
16. Pull'N'Ride™ tab for easy on/off
17. 3D reflective patches
18. Clear Vision Pad™ visor-cleaning system on the left-hand side
19. Touch Screen™ system on index finger and thumb
20. CE KP2

SIZES. XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13 and 3XS-05 / 2XS-06 / 4XL-14 / 5XL-15 in Black / Grey

TFX1 AIRFLOW SHORT

The ultimate Trail-Adventure glove to travel long and far in the heat.

The TFX1 AIRFLOW SHORT is designed for trail trips in the heat. It offers comfort, safety, robustness, and ventilation. Made from tough 3D mesh fabric and perforated goat leather, it includes an AirGO PROTECH® shell and VibraLess™ anti-vibration pads.

01. Topside construction that combines nylon and 3D mesh fabric for ventilation
02. Supple full-grain goat leather palm (perforated for ventilation)
03. External-seam finger construction
04. Nylon fourchettes / Mesh bottom of fourchettes
05. Thumb-index finger intersection in honeycombed 3D mesh fabric for optimal ventilation
06. Breathable Coolmax® lining to keep you cool and dry
07. 5 mm-thick foam palm reinforcement under Superfabric®
08. Ventilated AirGO PROTECH™ metacarpal-knuckle protector, with air duct
09. Wide SuperFabric® protective reinforcement covering the thenar eminence and the hypothenar
10. 3-mm foam protective reinforcements on ring and pinky fingers and TPU protection with air vent on index and middle fingers
11. 3-mm foam forearm protection under fabric
12. V-shaped dual elastic band closure system and velcro fastening with puller tab
13. Anti-Twist accordion band between ring and pinky fingers to limit the risk of fingers being pulled apart if you fall (a FIVE innovation)
14. Reflective logos on topside
15. VibraLess™ pads (exclusive FIVE Technology) included at strategic points (on palm and thumb) to minimize vibration from handlebars
16. Touch Screen™ system on index finger and thumb
17. Clear Vision Pad™ on the left hand for wiping helmet visor or goggles
18. Palm-side laser-printed patterns on index and middle fingers and thumb
19. CE KP1

SIZES. XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

- 01. Topside construction that combines stretch Twill Span and stretch nylon
- 02. Suede synthetic leather palm
- 03. Nylon fourchettes / Mesh bottom of fourchettes
- 04. 3mm-thick foam hypothenar reinforcement
- 05. Total ERGO PROTECH® TPR protection on the topside of the hand with integrated memory foam
- 06. Abrasion-resistant nylon reinforcement
- 07. Velcro tab wrist closure
- 08. Touch Screen™ system on index finger
- 09. Vegan Friendly
- 10. CE KP1

DESIGNED
FOR HIGH-PRECISION
TRAIL RIDING.

Enjoy riding in cold weather.

In the winter, more than any other time of the year, riding requires serious steering skills. The slippery street and road surfaces mean that ugly surprises await you at every turn.

The wind and the extra-low temperatures assault your extremities, starting with your hands, and can affect your reflexes. So, winter calls for specially designed and adapted equipment. The effectiveness of a winter glove lies not only in its thickness, but in a plethora of details that make a difference once you start riding in the cold. This is exactly what we offer in our winter range. It includes a glove for every circumstance, and on each and every one, we aim for a perfect balance: quality materials / thermal insulation / weatherproofing / comfort / steering sensitivity / protection.

You will also find some of our winter gloves aimed to riding in the city in our URBAN range.

WFX PRIME EVO GTX

THE NEW-GEN
WINTER GLOVE
THAT KEEPS YOU
EVEN WARMER.

BLACK GREY

The new-gen
winter glove
that keeps you
even warmer.

The WFX PRIME EVO GTX offers the very best to face the winter cold. Made of goat leather and Softshell fabric, it includes a GORE-TEX® membrane, Primaloft® thermal insulation, and FIVE Thermo+™ construction for unparalleled comfort in the cold.

As the next iteration of the WFX Prime, the first FIVE glove featuring heat-sealed seamless construction on the topside so it's totally waterproof, the WFX Prime Evo GTX takes protection from the cold a step further by using FIVE THERMO+™ construction, an innovative concept in thermal insulation.

of Thermo+™ construction. The thicker and more dense insulation in the fourchettes creates a much more effective heat barrier and helps keep the hand's natural heat inside the glove for even longer.

The fabrication of this premium winter glove is ultra-modern. The use of cutting-edge technological materials, such as the Soft Shell structure, the GORE-TEX® Grip™ membrane that's partly bonded to the palm, and Primaloft® Gold ultra-high-performance, water-repellent thermal insulation allowed us to create a glove that's both waterproof and warm without being too bulky. It offers unparalleled

WFX PRIME EVO GTX

Most winter gloves have been made in the same way for ages...To put it simply, with thick, dense thermal insulation on the topside of the hand and a thinner layer on the palm, all the way up to between the fingers. And this is the weak point of this traditional type of construction. The cold ends up getting in through the fourchettes (this is what the zone between the fingers is called). FIVE has redesigned the basic principles of thermal insulation by using a new method of construction we call THERMO+™, which offers up to 20% greater thermal efficiency. The idea is quite simple: the thick insulation on the topside reaches all the way down into the area between the fingers, whereas the thinner insulation is contained within the flat part of the palm and fingers. This means rethinking all the other elements in the glove to preserve the impeccable suppleness of it all, as well as proper grip on the controls. It's when you ride in the cold that you can truly understand the benefits

touch sensitivity and exceptional thermal and handling capabilities, which will allow you to face bad weather and the cold without any worries whatsoever. But, since in winter, the risk of taking a spill is just as high as that of falling temperatures, the WFX Prime Evo GTX features premium protective elements: a FIVE ERGO PROTECH® one-piece shell and a wide panel in SuperFabric®, an ultra-tough fabric that includes epoxy resin microbeads, visible on the thenar eminence and concealed underneath the leather on the hypothenar. Not to mention, and this is new for this EVO version, a soft-TPR protective palm shell in ERGO PROTECH.

The WFX Prime Evo GTX: all the advantages of a lightweight and highly protective glove, with real warmth as a bonus.

RACING

Winter rides?... Feel the heat.

In 2023, we've totally revamped our range of heated gloves, in a desire to make them even safer, more practical, and high-performance.

The four styles that make up our HG range share a common set of characteristics, including:

- ERGO PROTECH™ protective elements
- PRIMALOFT® thermal insulation
- The 5_DRYTECH™ waterproof, breathable membrane (except for the HG Prime GTX, which features a GORE-TEX® membrane)
- The latest generation of our FIVE battery-powered heating system that includes an electrical-filament circuit that goes over the back of your hand and down the fingers, all the way to the inside of the last finger
- A new design that lets you to recharge your batteries while you ride. (Using the optional Connection Kit cable, which you can purchase from your FIVE reseller)
- And lastly, our brand-new DUAL CONTROL adjustment and control system.

Each style then stands out due to its external construction and a few details related to design, materials, or finish.

The **HG Prime GTX** epitomizes the modern spirit and heads up the range with its GORE-TEX® membrane, heat-sealed, seamless Softshell topside construction inspired by extreme sports, and full-grain leather palm.

The **HG1 Evo WP** gives pride of place to leather, using it both for its topside construction and on its palm. It also features a 5_DRYTECH™ waterproof, breathable membrane, like its lower-end siblings.

The **HG2 Evo WP** blends nylon topside construction with a leather palm, offering riding pleasure to a wider audience.

The **HG3 Evo WP**, the most affordable style in the range, which is also available for women as the HG3 Evo WP Woman, opts for a “no-leather” vegan solution, with nylon topside construction and a Nash synthetic palm.

Each style is perfectly positioned to offer the best possible value for money, depending on your preferences and your budget, whether you love the most advanced products like the HG Prime GTX, reliable choices like the mostly leather HG1 Evo WP, versatile options like the HG2 Evo WP, or affordable, entry-level styles like the HG3 Evo WP.

You will also discover our latest HG model included in the Urban collection : HG Metro WP.

FIVE Heating Technology: thank you, electricity!

In theory, a heated glove is a winter glove with an added electrical resistor circuit powered by individual batteries, placed within the gloves or directly connected to the motorcycle*.

Its purpose is to produce artificial heat that repels the cold riders eventually feel when at the controls of a motorcycle in winter. But the inclusion of these electrical circuits requires a specific design and a certain level of expertise.

Our HG technology includes 1.3 mm-thick resistors (in other words, electrical wires), strategically placed on the back of the hand and the fingers, all the way down to their very tip, and on the inside of the last phalange. This type of construction offers uniform heat right where the cold is most acute, without compromising on palm sensitivity. Indeed, we haven't placed electrical resistors on the inside of the palm so we don't hinder your grip on the controls, but we have inserted a thin layer of thermal insulation. The heated handlebars grips of some motorcycles, which heat the inside of the palm, offer

a good addition to heated gloves, which warm up the zones that are most exposed to the cold: the back of the hand and the fingertips. But there's a major difference between the temperature sent through the resistors and what the rider will feel when they're on the move. The latter depends on external factors such as riding speed, the outside temperature, the wind, the length of the ride, the period of exposure to the cold, each individual's temperature sensitivity, etc. Each rider will thus adapt the level of heat as desired, depending on these different parameters. Our system offers 3 levels of heat: Eco, Regular, and Boost. Each of these sends 45°C, 50°C, or 60°C heat through the circuit, to keep hands at a comfortable temperature. The goal isn't to feel too much heat, but simply to make sure that your hands don't get too cold during your ride. In Eco mode, battery life can last up to 6 hours. In Boost mode, which consumes more energy, power will last for around 2 hours. Battery life will vary depending on various parameters (the actual battery charge level, the temperature, the level of humidity, etc.).

Our new HG technology now features a second cable within the battery pocket for connecting the gloves to an AC electrical charger or our motorcycle connection kit. The batteries can then be recharged while you're heating the gloves. The 7.4 volt, 2.2 Ah batteries reach a full charge in just 4 hours with the dual charger provided. They can remain in their pocket within the glove while they're being charged.

* With optional FIVE HG connection kit

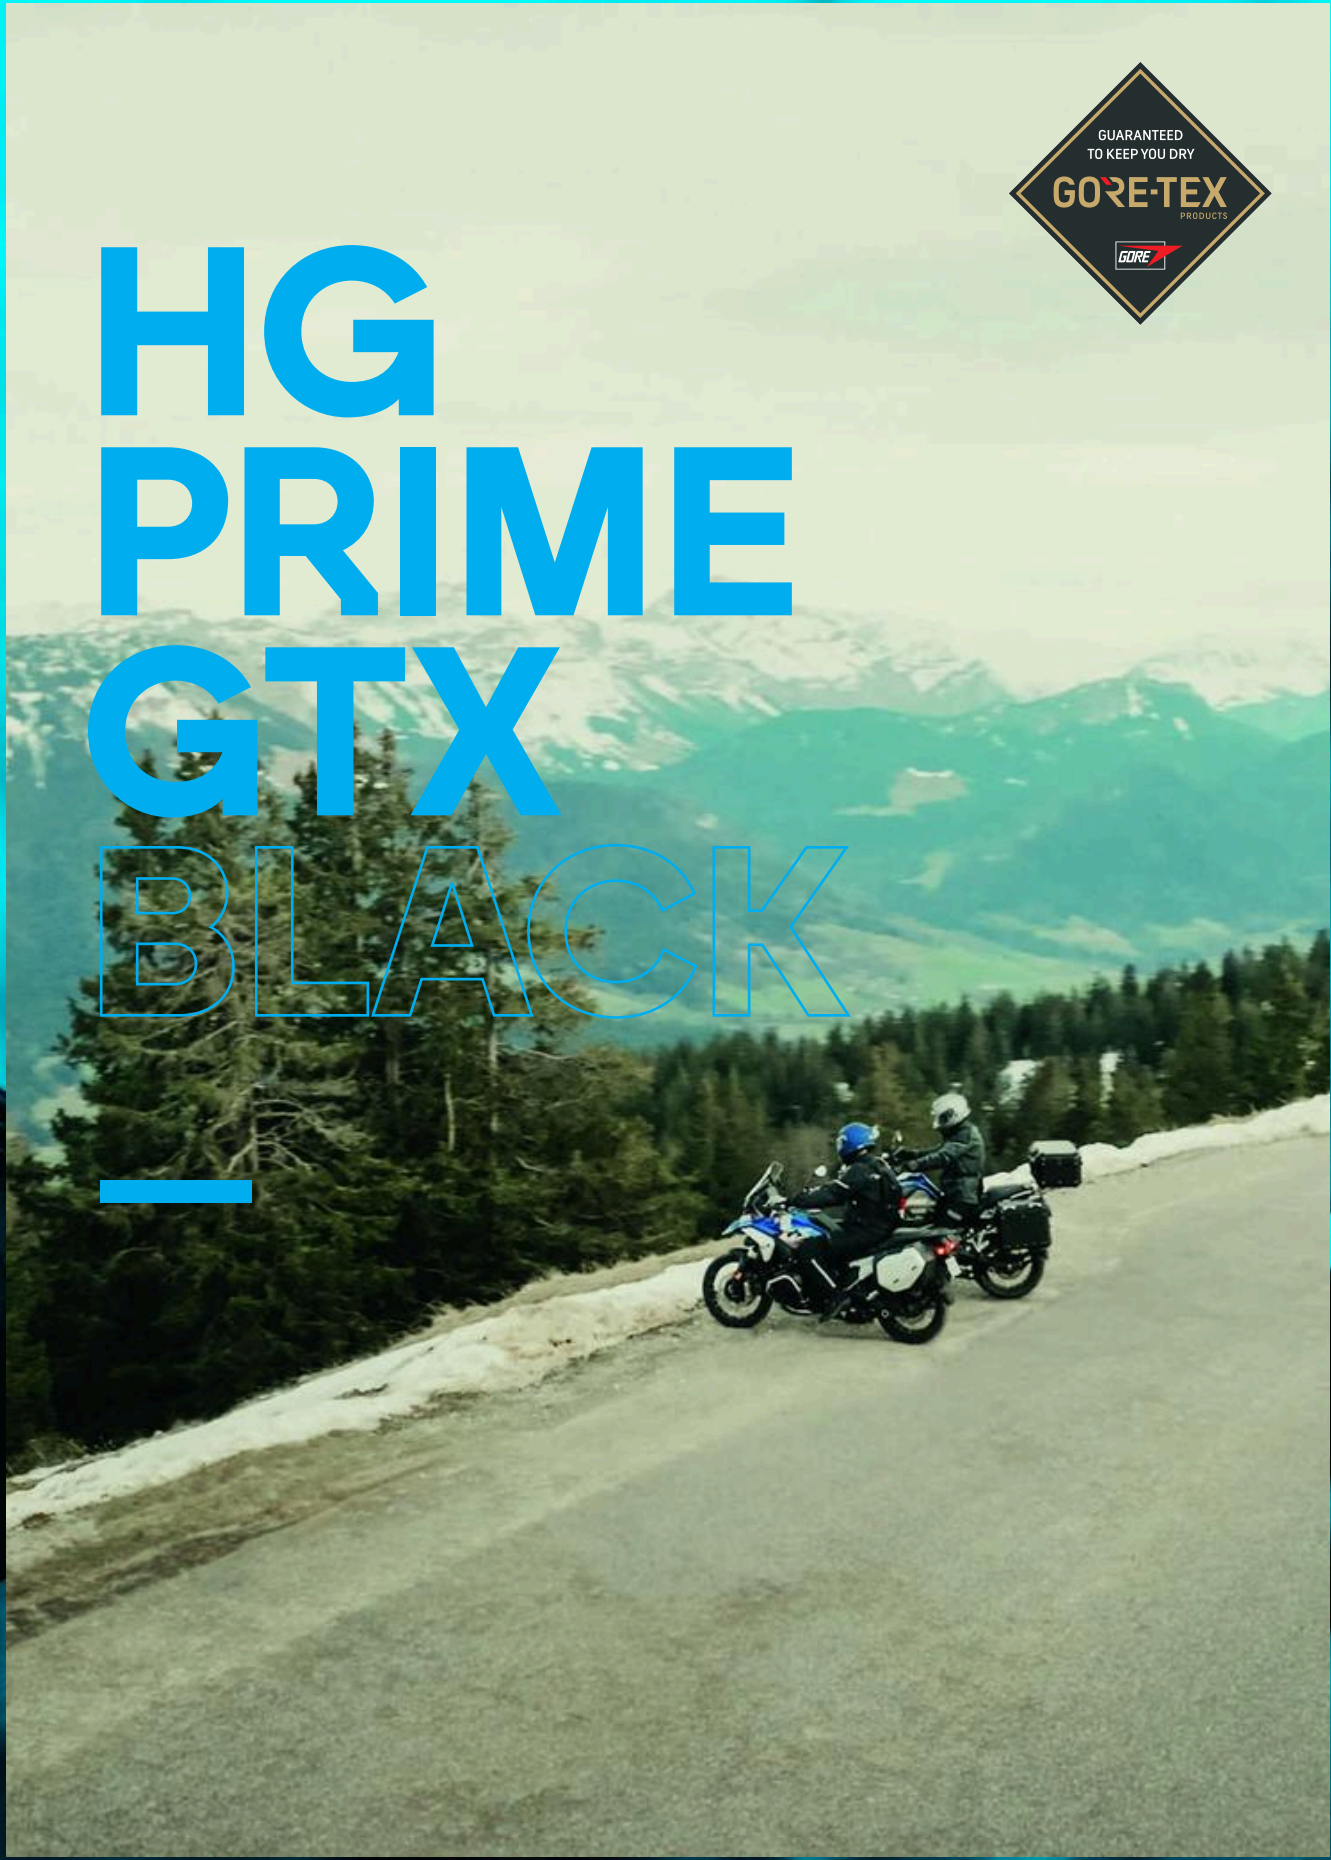

Dual control, or how to make it easier and safer to adjust your heated glove controls.

The new DUAL CONTROL system developed by FIVE wants to make starting up and adjusting your HG heated gloves simpler and safer than ever.

Starting from the premise that the less you let up on the handlebars and controls, the safer your riding will be, we've designed a system that allows you to control the heating and adjust both of your gloves while you keep your right hand on the controls, on the throttle and front brake, which are essential elements for keeping your motorcycle under control. Placed on the cuff or the back of the right hand, depending on the style, the DUAL CONTROL button allows you to activate the heating on your gloves and adjust its level, cycling through the three levels by simply pressing repeatedly with your left index finger. The two gloves are connected using electromagnetic waves. The LED screen on the left glove displays the 3 levels of heat available, as well as the one selected, and the LED battery indicator on each hand allows you to know how much power you have left to heat each glove.

The FIVE Dual Control system, simpler and safer, allows you to stay focused on the road by keeping a hand constantly on the handlebars. It takes our new heating technology, and, especially, the riding experience, to a new level of efficiency and ease of use under wintertime conditions.

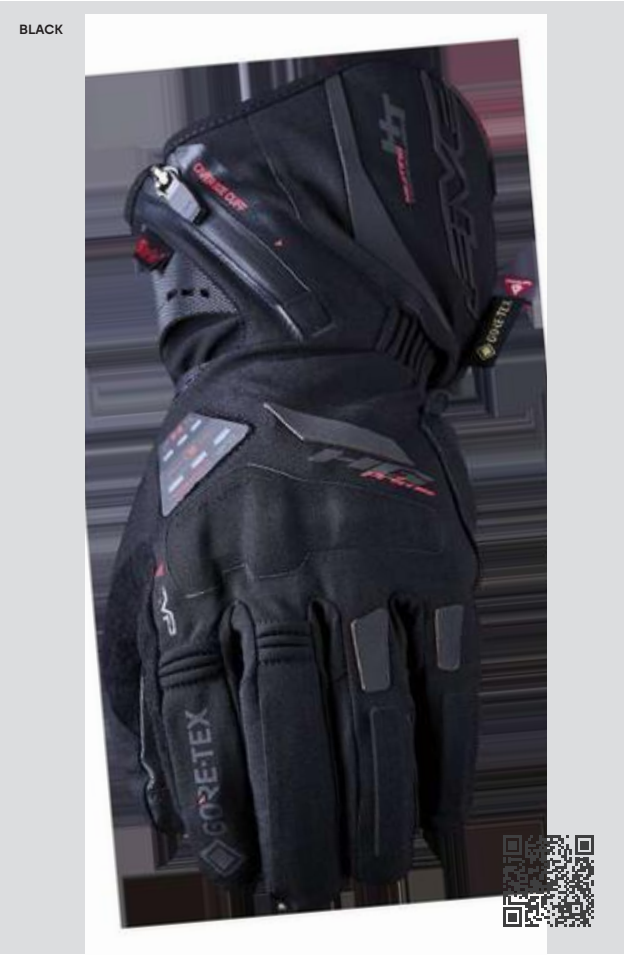

The truly exceptional heated glove, with a GORE-TEX® membrane.

HG PRIME GTX

The truly exceptional heated glove, with a GORE-TEX® membrane.

The HG PRIME GTX is our vision of a premium heated glove: heat-sealed Softshell and leather palm construction, HG Dual Control™ technology, a GORE-TEX® Grip membrane, PrimaLoft® Gold 200g insulation, ERGO PROTECH® protection, and modern features.

01. Seamless Softshell heat-sealed topside construction
02. Full-grain goat leather palm
03. Dual Control™ Heating Technology
04. GORE-TEX® weatherproof, breathable membrane, partly bonded with Grip Technology
05. PrimaLoft® Gold 200 g thermal insulation on the topside
06. PrimaLoft® Grip Control 60 g thermal insulation on the palm
07. ERGO PROTECH® metacarpal-knuckle protector
08. ERGO PROTECH® honeycombed palm slider
09. SuperFabric® reinforcement
10. OverSizeCuff™ adjustable cuff
11. Water-resistant Battery pocket
12. Anti-drip lining on the cuff
13. Reflective print
14. Dual Closure System
15. Clear Vision Pad™ on the left hand
16. Touch Screen™ system on index finger and thumb
17. CE KP1

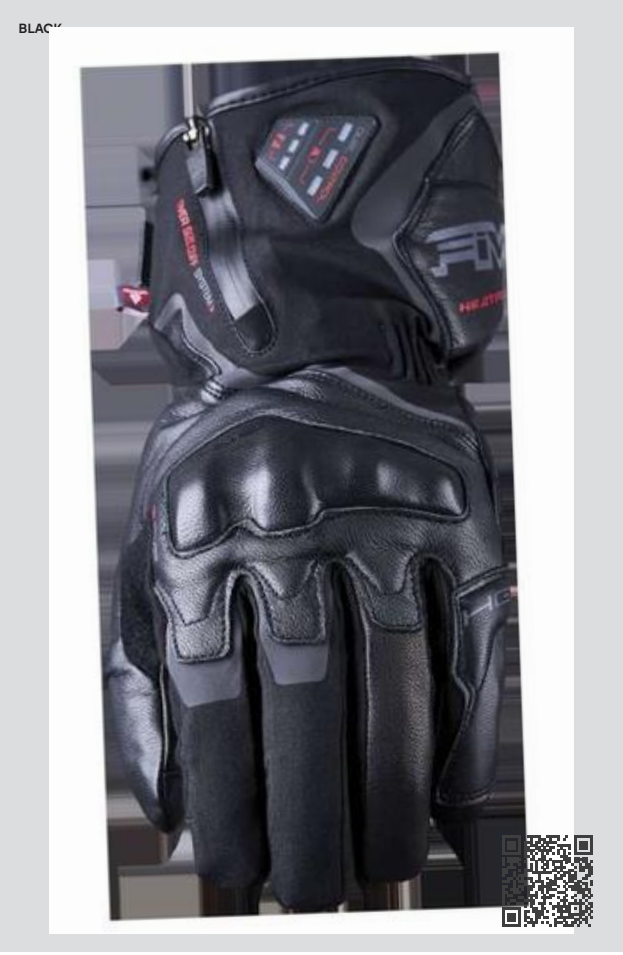

SIZES. XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

HG1 EVO WP

The heated glove focused on leather, with an aluminum insert.

The HG1 EVO WP is the heated glove that makes the most of leather, both for its topside construction and on the palm, with HG Dual Control™ technology, a 5_DRYTECH™ membrane, PrimaLoft® Gold insulation, ERGO PROTECH® protection, and modern features.

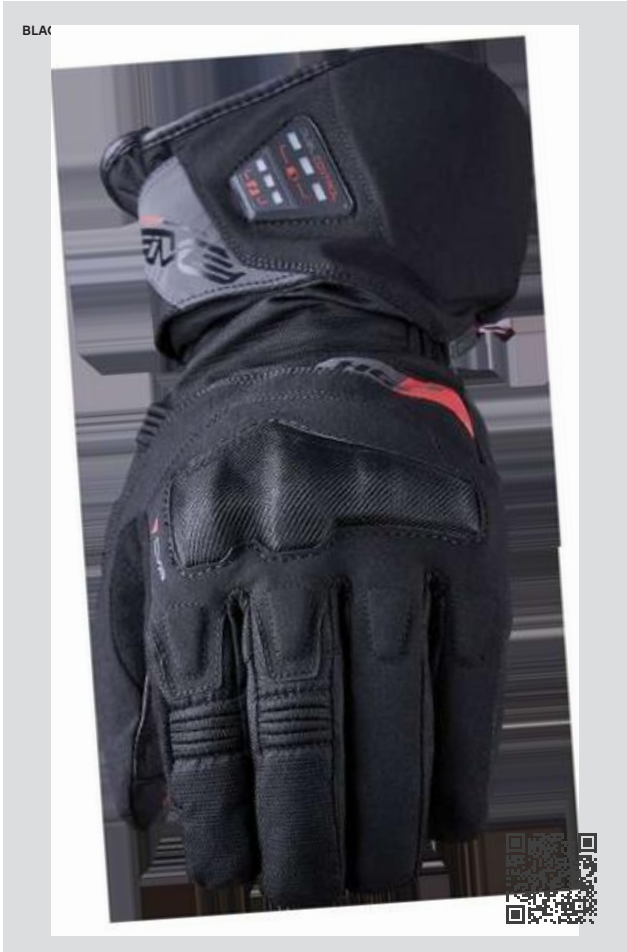

01. Full-grain goat leather + nylon topside construction
02. Full-grain goat leather palm
03. Dual Control™ Heating Technology
04. 5_DRYTECH™ weatherproof, breathable membrane
05. PrimaLoft® Gold 170 g thermal insulation on the topside
06. PrimaLoft® Grip Control 60 g thermal insulation on the palm
07. Aluminum foil insert on the topside
08. ERGO PROTECH® metacarpal-knuckle protector
09. ERGO PROTECH® honeycombed palm slider
10. OverSizeCuff™ adjustable cuff
11. Water-resistant Battery pocket
12. Anti-drip lining on the cuff
13. Reflective print
14. Single Closure System
15. Clear Vision Pad™ on the left hand
16. Touch Screen™ system on index finger and thumb
17. CE KP1

SIZES. XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13 / 4XL-14 / 5XL-15

HG2 EVO WP

The heated glove that combines fabric and leather, with an aluminum insert.

The HG2 EVO WP is a heated glove that combines modern fabrics on its topside and leather on the palm, with HG Dual Control™ technology, a 5_DRYTECH™ membrane, PrimaLoft® Gold insulation, ERGO PROTECH® protective elements, and modern features.

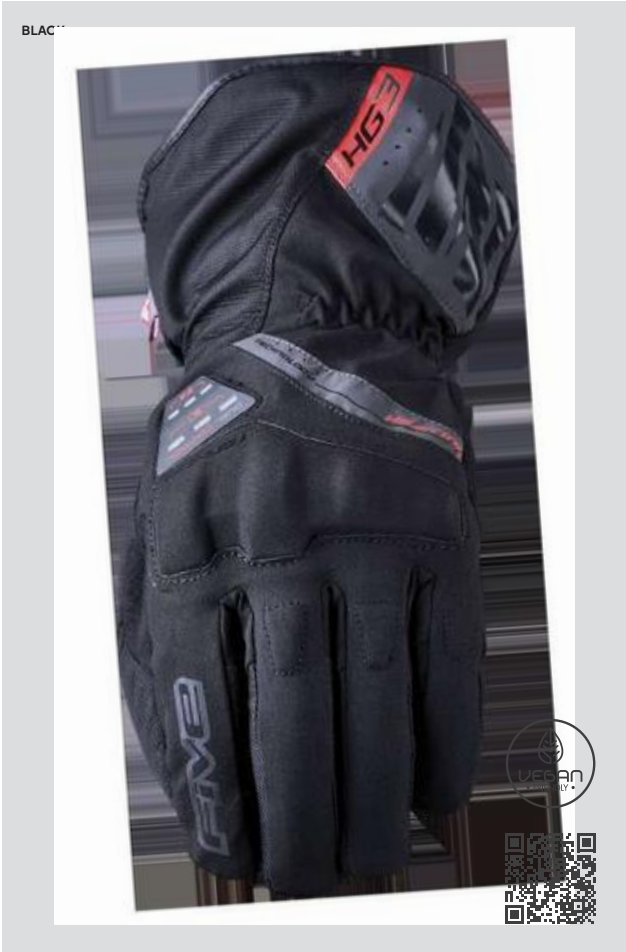

01. Nylon CatEye topside construction
02. Full-grain goat leather palm
03. Dual Control™ Heating Technology
04. 5_DRYTECH™ weatherproof, breathable membrane
05. PrimaLoft® Gold 170 g thermal insulation on the topside
06. PrimaLoft® Grip Control 60 g thermal insulation on the palm
07. Aluminum-foil insert on the topside
08. ERGO PROTECH® metacarpal-knuckle protector
09. ERGO PROTECH® palm slider
10. Dual Closure System
11. Clear Vision Pad™ on the left hand
12. Touch Screen™ system on index finger and thumb
13. Water-resistant Battery pocket
14. Reflective print
15. CE KP1

SIZES. XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

HG3 EVO WP

The vegan heated glove, with an aluminum insert.

The HG3 EVO WP is a heated glove with fully synthetic and vegan construction and comes with HG Dual Control™ technology, a 5_DRYTECH™ membrane, PrimaLoft® Gold insulation, ERGO PROTECH® protective elements, and modern features.

01. Nylon CatEye topside construction
02. Nash synthetic leather palm
03. Dual Control™ Heating Technology
04. 5_DRYTECH™ weatherproof, breathable membrane
05. PrimaLoft® Gold 170 g thermal insulation on the topside
06. PrimaLoft® Grip Control 60 g thermal insulation on the palm
07. Aluminum foil insert on the topside
08. ERGO PROTECH® metacarpal-knuckle protector
09. ERGO PROTECH® palm slider
10. Dual Closure System
11. Clear Vision Pad™ on the left hand

ACCESSORIES

1_ HG CONNECTION KIT

Choose the optional HG connection kit to travel far and wide in the cold weather and enjoy unlimited battery life for your FIVE HG heated gloves. It comes with cables that allow you to directly connect your FIVE HG heated gloves to the cigarette lighter or the battery terminals of your motorcycle. The cables come in two sections (a Y-shaped “rider” section that includes a 12 V > 7.4 V transformer, and a “motorcycle” section) that plug into each other. Supplied with two end caps (which are compatible with the cigarette lighter or the battery terminals, depending on what your motorcycle offers), the “motorcycle” cable, particularly if it’s connected to the battery terminals, can simply stay in place once it’s set up. In terms of the “rider” section, the cables are long enough to be placed inside each sleeve and along the body, coming out at the hemline of your jacket, without hindering your movements in the least when you’re at the controls. It easily connects to the gloves using the additional female socket integrated into each glove’s battery compartment. You then simply have to plug in the “rider” cable to the “motorcycle” cable, and you’ll be all set to face the cold without a second thought. The FIVE system has the advantage of keeping the batteries inside the gloves when they’re connected to the motorcycle using the cables. This is much more practical for connectivity, and this way, each battery gets recharged while you ride, giving you the freedom to keep the heating system operating, even when you get off your bike and step away from it to admire the view.

So easy to install and use, the FIVE HG connection kit will be your essential companion on long wintertime rides. No need to worry about your batteries running out, because now you have unlimited power, so you can ride with total peace of mind and nice, warm hands.

Compatible only with FIVE HG gloves.

2_ HG DUAL CHARGER

Though one set comes with each pair of FIVE HG gloves, you may find it helpful to have an extra charger or need to replace a lost one. Whatever the case, we offer the FIVE HG charger as an accessory. It allows you to simultaneously recharge both batteries that come with your FIVE HG gloves in just 4 hours.

Various power adapters are provided depending on your geographical area.
100/240 V Input – 50/60 Hz / 0.6 A Max. / Output 8.4 V DC – 1.3 A – 10.9 W.
Compatible only with FIVE HG gloves.

3_ HG GLOVE BATTERY

To replace a dying battery or one you’ve lost, we offer our FIVE HG batteries as an accessory. The 7.4 V/2.2 Ah batteries charge up completely using the FIVE HG dual charger in just 4 hours.

Voltage: 7.4 V / Capacity: 2200 mAh Current/16.28 Wh Power.
Compatible only with FIVE HG gloves.

GORE®
WINDSTOPPER®

ULTRA WS

When winter comes, the cold seeps in during most of our rides. So we need to be ready for it. The best thing to do is to choose winter gloves that are specially designed to offer excellent thermal insulation. But you may also want to use the everyday pair that you normally do when the weather is less severe. One solution to this is to slip on a pair of Ultra WS gloves underneath. Their GORE-TEX® WindStopper structure acts as a barrier against the wind and cold (without being totally waterproof), retaining the heat that’s naturally emitted by your hands. Their thinness allows you to slip them into your usual gloves, as long as the latter are not too tight. These gloves can also be used on their own, for bicycling or on foot for hikes or simple jaunts around town. Truly tough, they’ll be your faithful companion throughout your various wintertime activities.

01. GORE-TEX® WindStopper seamless construction
02. Touch Screen™ system on index finger and thumb

SIZES . XXS-06 / XS-07 / S-08 / M-09 L-10 / XL-11 / 2XL-12 / 3XL-13

UNIT

The cold doesn’t always announce its arrival and isn’t limited to wintertime. You may need some protection from it on chilly mornings or evenings, or even in the daytime when the weather proves to be particularly unpleasant (wind, clouds, etc.).

Wearing UNIT under-gloves underneath your usual gloves will astutely keep away that cold that can so easily creep in under such conditions. Made from tough stretch nylon, they offer a very comfortable additional layer in situations like this. Truly lightweight, they’ll fit easily in a small bag or underneath your seat, so you’ll always have them ready. They cover a range of sizes and, so, can be perfect for either you or your passenger.

01. Tough stretch nylon fabric topside
02. Nylon palm
03. Touch Screen™ system on thumb

SIZES . XXXS / XS / S / L / XL / XXXL

It's not just about riding style, but also about riding with style!

Riding a motorcycle isn't just for men anymore, and, fortunately, women are now flocking to riding in record numbers. And not just as passengers. More and more of you are taking the controls, and we're simply delighted.

Our Woman range has been designed just for you. Though certain styles feature the technical characteristics offered by our gloves for male riders, their overall shape, fit, and look are customized to the hands and tastes of female riders. Because, even at the controls of a motorcycle, a woman should never have to sacrifice a certain form of elegance.

A woman's hands say so much about her personality, so it makes sense to treat them with the greatest of care by protecting them appropriately against bad weather or the risks associated with a fall. Whether you're riding a two-wheeled vehicle for practical purposes or because motorcycles are your number-one passion, and whether you ride on the track at the controls of a sport bike, in the city on your scooter, or you're exploring the world on a powerful trail bike, our Woman range allows you to choose the glove that's best suited to your type of riding and the season.

Discover our selection of women's styles crafted using the FIVE approach that seeks to offer the best possible combination of comfort and protection through the sub-collections within the Woman range: Racing, Street, Urban, Trail-Adventure, and Winter.

Our intent is to offer you the ideal glove, one that's both high-performance and elegant.

WOMAN

OFF-ROAD

For a sporty
approach
to everyday
rides.

RFX SPORT EVO WOMAN

This all-leather glove with its classic style focuses primarily on comfort and flexibility but is no less modern or safe with its honeycombed shell underneath the leather, its palm slider, and its Touch Screen™ system.

The RFX Sport Evo is the entry-level style for our Racing range. It focuses on comfort over performance and is designed for riders who want an effective, affordable glove for everyday rides on their road or sport bike. It offers a significant level of protection and comfort for road use due to its goat leather construction, new main ERGO PROTECH® honeycombed shell concealed underneath the leather (perforated for a bold look), its multiple foam reinforcements, and its soft-TPR hypothenar protective shell. It retains a deliberately classic aesthetic compared to a sport glove, in its black version, so it can discreetly support its rider from the road to the office, yet it shows off a more exciting and sporty side in its colored versions.

RFX1 EVO WOMAN

The future of Racing gloves.

BLACK / WHITE

More than just an evolution, it's a revolution! Our most popular racing glove stays ahead of the pack with this new-gen design. It redefines performance standards by offering unprecedented comfort and precision.

- 01. Cow leather and Stretch Kevlar® topside construction
- 02. Supple full-grain goat leather palm
- 03. Stretch Kevlar® cuff
- 04. Stretch perforated nylon inner fourchettes with exterior stitching
- 05. Leather accordion comfort panels on topside
- 06. Anti-blister micro-Bemberg pads on palm
- 07. Finger reinforcements in foam and Superfabric® under leather patch on pinky finger
- 08. Multilayered hypothenar reinforcement with Kevlar®, 3 mm-thick foam and Superfabric® under full-grain cow leather
- 09. Ventilated AirGO PROTECH™ metacarpal-knuckle protection and honeycombed TPU metacarpal protection
- 10. ERGO PROTECH® Performance honeycombed protective shell on hypothenar (palm slider)
- 11. TPU finger protectors with air intake vent on index and middle fingers
- 12. TPR Cuff Slider™ forearm protection
- 13. Dual closure system, with velcro on wrist and seamless heat-sealed adjustment tab on cuff
- 14. Anti-Twist accordion band in goat leather and Schoeller®-Keprotec between ring and pinky fingers to limit the risk of fingers being pulled apart if you fall (a FIVE innovation)
- 15. Digitally printed goat leather palm reinforcement for optimal grip
- 16. Shape and size adapted to the feminine form
- 17. CE KP2

Dylan FERRANDIS – MXF Race
4x US SX-MX250 & MX450 champion

Don't choose
total look.
**Choose total
performance.**

In motocross or off-road, most riders match their gloves to the rest of their look, and consider gloves as just an extension of their jersey / pants outfit.

You just have to try on a FIVE glove to understand all the benefits of wearing a product designed and made for effectiveness and performance, not just for the look. FIVE gloves provide both improved steering sensitivity, and help prevent blisters, sworn enemies of any pro or amateur rider. They significantly enhance the joy of riding, and, therefore, the rider's level of performance. Just as we don't necessarily match our helmet or our boots to the rest of our outfit, the most demanding riders know that only a glove specialist can offer them the best MX or Off-Road glove. Wearing FIVE gloves is no faux pas... on the contrary, it's a sign that you pay attention to every single detail. And that alone gives you a serious edge over the competition.

The new-gen MX glove for Absolute Control.

—

MXF RACE

x DYLAN FERRANDIS

Now that it's time to replace it, FIVE is here with not one, but two offerings (the MXF RACE and MXF1 EVO). Here's the first of them: the MXF RACE.

Designed for riders with a fluid, light-as-air style, who love being one with their machine and reject the idea of using any type of palm padding so they can better feel the controls and read the terrain, it's meant to be used with Soft grips (preferably). Because, just as you don't use the same level of tire firmness for every kind of terrain, it's important to select your grips carefully depending on your riding style or your preferences (and to match it with the right pair of gloves). The MXF RACE is impressive, because it offers the sensation of wearing

nothing at all. It's like a second skin with its Nanofront™ palm, an ultra-thin, absorbent Japanese material that offers amazing grip, which FIVE began using in motocross gloves with the MXF PRORIDER. Its ultra-thin, ultra-tough stretch nylon topside construction and seamless, heat-fused wrist construction help make it very supportive and comfortable overall. Its fourchettes (finger gaps) in 2:2 Mesh honeycombed fabric and its

laser-cut perforations located at strategic points ensure perfect air circulation. What's surprising about the MXF RACE is the level of precision you feel on the handlebars and the quality of each detail that makes it. Such as the anti-blister gel pad at the point of contact with the handlebars, a solution that's far more effective and comfortable than using "donuts". Suffice it to say that the MXF RACE is already the top choice for the pro riders who participated in its development. It's what will make the difference, without a doubt, leading you all the way to victory.

*Focus: Performance and precision
Use with Soft grips is strongly recommended.*

MXF RACE

The new-gen MX glove for Absolute Control.

BLACK

WHITE

FLUO YELLOW

The MXF RACE, a new-gen motocross glove, feels like a second skin with its Nanofront™ palm and stretch nylon construction. It's ultra-lightweight and precise, designed for riders who want maximum performance and control, without padding.

- 01. Ultra-thin stretch nylon topside
- 02. Japanese Nanofront palm / 0.4 mm thickness for optimum feel at the controls
- 03. Fused, stitch-free variable multilayered wrist construction
- 04. Ergo Fit fourchettes in 2:2 Mesh
- 05. Internal anti-blister gel pad on thumb
- 06. Velcro wrist closure
- 07. Laser perforations on palm, topside, and thumb to evacuate perspiration
- 08. Silicone print on palm, index, and middle fingers for better grip
- 09. Vegan Friendly
- 10. Closed-track use only

SIZES . XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

MXF1 EVO

The new-gen MX glove for Absolute Comfort.

BLACK

WHITE

RED

The MXF1 EVO, a new-gen motocross glove, focuses on comfort, with an AX Suede Cinco® palm and anti-blister pads. It's perfect for demanding terrain or hard grips, offering maximum comfort and an impeccable fit.

- 01. Ultra-thin stretch nylon topside
- 02. AX Suede Cinco® synthetic leather palm
- 03. Embossed Neoprene™ wrist for enhanced comfort and fit
- 04. Ergo Fit fourchettes in 2:2 Mesh
- 05. Anti-blister pads in gel on thumb and in Micro-Bemberg on palm
- 06. Velcro wrist closure
- 07. Laser perforations on palm, topside, and thumb to evacuate perspiration
- 08. Silicone print on palm, index, and middle fingers for better grip
- 09. Vegan Friendly
- 10. Closed-track use only

SIZES . XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

MXF¹ EVO FLUO YELLOW

THE NEW-GEN MX GLOVE
FOR ABSOLUTE COMFORT.

MXF2 EVO

The MX glove with a flex wrist.

The MXF2 EVO is a practical MX glove with a strap-free elastic wrist, which offers comfort and support with its Neoprene™ construction. Its perforated Clarino palm and silicone prints ensure excellent grip and ventilation, for impeccable riding control.

- 01. Twill Span stretch fabric on topside
- 02. Perforated Clarino synthetic leather palm
- 03. Embossed Neoprene™ wrist for enhanced comfort and fit
- 04. Ergo Fit fourchettes in 2:2 Mesh
- 05. Thumb reinforcement
- 06. Silicone print on palm, index, and middle fingers for better grip
- 07. Vegan Friendly
- 08. Closed-track use only

MXF4

The motocross glove that gets straight to the point.

The MXF4 is a motocross glove that gets straight to the point, with topside polymesh construction, an AX Suede® palm, silicone prints for maximum grip, and an effective velcro tab closure. Designed for maximum freedom of movement.

- 01. Polyester Mesh construction (topside) / AX® Suede synthetic leather (palm)
- 02. Logo and graphic sublimated prints
- 03. Palm reinforcement underneath synthetic leather
- 04. Fourchettes (finger contours) in Lycra®
- 05. TPR + Velcro tab closure system
- 06. Silicone print on the inside of the index finger for good handlebar grip
- 07. Vegan Friendly
- 08. Closed-track use only

SIZES .XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

NEO

The new “neo” glove for winter training.

BLACK

The NEO, designed for winter MX or BMX training, combines Lycra® Fleece construction to protect you from the cold, silicone prints for optimum grip, and practical features such as the Clear Vision Pad™ and Touch Screen™.

- 01. Lycra® Fleece construction, to block out the cold and wind (topside)
- 02. AX® Suede Cinco synthetic leather that combines comfort and excellent grip (palm side)
- 03. Silicone prints on the index and middle fingers and on the palm, for grip on the controls
- 04. Embossed Neoprene™ wristband with integrated velcro adjustment tab
- 05. Outer part of the thumb in Clear Vision Pad™ micro-terry foam, for cleaning off your face mask
- 06. Fourchettes (between the fingers) in water-repellent Lycra®
- 07. Pull'N'Ride™ on/off tab integrated into the wristband
- 08. Touch Screen™ system on index finger
- 09. FIVE embossed or retro-reflective logos
- 10. Vegan Friendly
- 11. Closed-track use only

SIZES . XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

HOLCOMBE

Steve HOLCOMBE – E2
9x Enduro World Champion

THE MULTIPLE
CHAMPIONSHIP-WINNING GLOVE
FOR THE WORLD OF ENDURO.

Steve HOLCOMBE – E2
9x Enduro World Champion

E2

The multiple championship-winning glove for the world of Enduro.

BLACK

GREY / FLUO YELLOW / NAVY

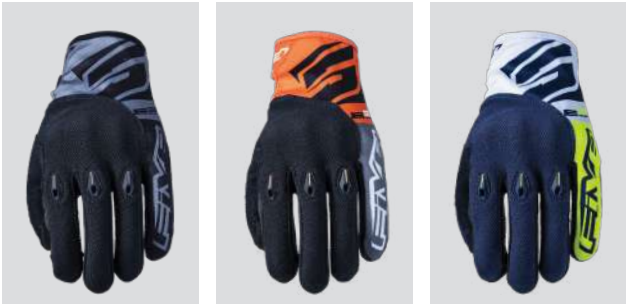

ORANGE

The E2, CE KP1-certified and designed for Enduro riding, combines the performance of a motocross glove with the protection you need for wilderness rides, including strategic soft TPR or anti-abrasion reinforcements, leaving your movements unhindered.

01. Topside: Mixed construction, with ventilated mesh on the inner side / extra-tough 4-way-stretch polyester on the outside
02. Palm: AX® Suede Novobuck™ / hypothenar and control contact-point reinforcement in synthetic leather / 2 mm foam rubber reinforcements on the palms / 3 mm foam rubber pads on the thumbs
03. Dual ERGO PROTECH® protective shells in soft TPR, virtually undetectable
04. Mini-protective shells in TPR on the fingers + 3 mm foam rubber reinforcements on the ring and little fingers
05. 5 TPR Sonic heat-sealed protective logo
06. FIVE ErgoFit construction for optimal fit and freedom of movement
07. Synthetic leather reinforcement on the edge of the hand, up to the radius
08. Silicone print on the inside of the fingers for optimal grip
09. Clear Vision Pad™ visor cleaning system on the left-hand side
10. Touch Screen™ system on index finger
11. Adjustable tab closure integrated into the mesh and velcro fabric structure of the glove
12. Vegan Friendly
13. CE KP1 certified (open-road use)

E3 EVO

The Enduro leisure glove.

BLACK

ORANGE

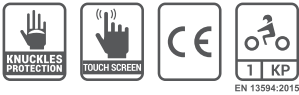

FLUO YELLOW / BLUE

The E3 EVO is CR KP1-certified and made for leisure Enduro riding, offering soft TPR metacarpo-phalangeal protection underneath Spandex™/Polymesh construction. It combines flexibility, light weight, and optimal grip, with its silicone palm print.

01. Sublimated Spandex™ and Polymesh construction (topside) / AX® Suede Novobuck (palm)
02. Soft TPR metacarpal-phalangeal protective shell concealed under fabric
03. Soft TPR phalangeal mini protective shell (index, middle, ring fingers)
04. Synthetic leather reinforcement on the hypothenar muscle
05. Synthetic leather thumb reinforcement at the zone of contact with the handlebars
06. Silicone print on the palm to enhance grip
07. Fourchettes (finger contours) in Heavy Lycra® to boost flexibility and airflow
08. Closure system with velcro flap and pull tab
09. Touch Screen™ system on index finger
10. Vegan Friendly
11. CE KP1 certified (open-road use)

SIZES. XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

SIZES. XS-07 / S-08 / M-09 / L-10 / XL-11 / 2XL-12 / 3XL-13

E-WP

The off-road glove for when it's raining.

BLACK

BLACK / FLUO YELLOW

NIGHT BLUE

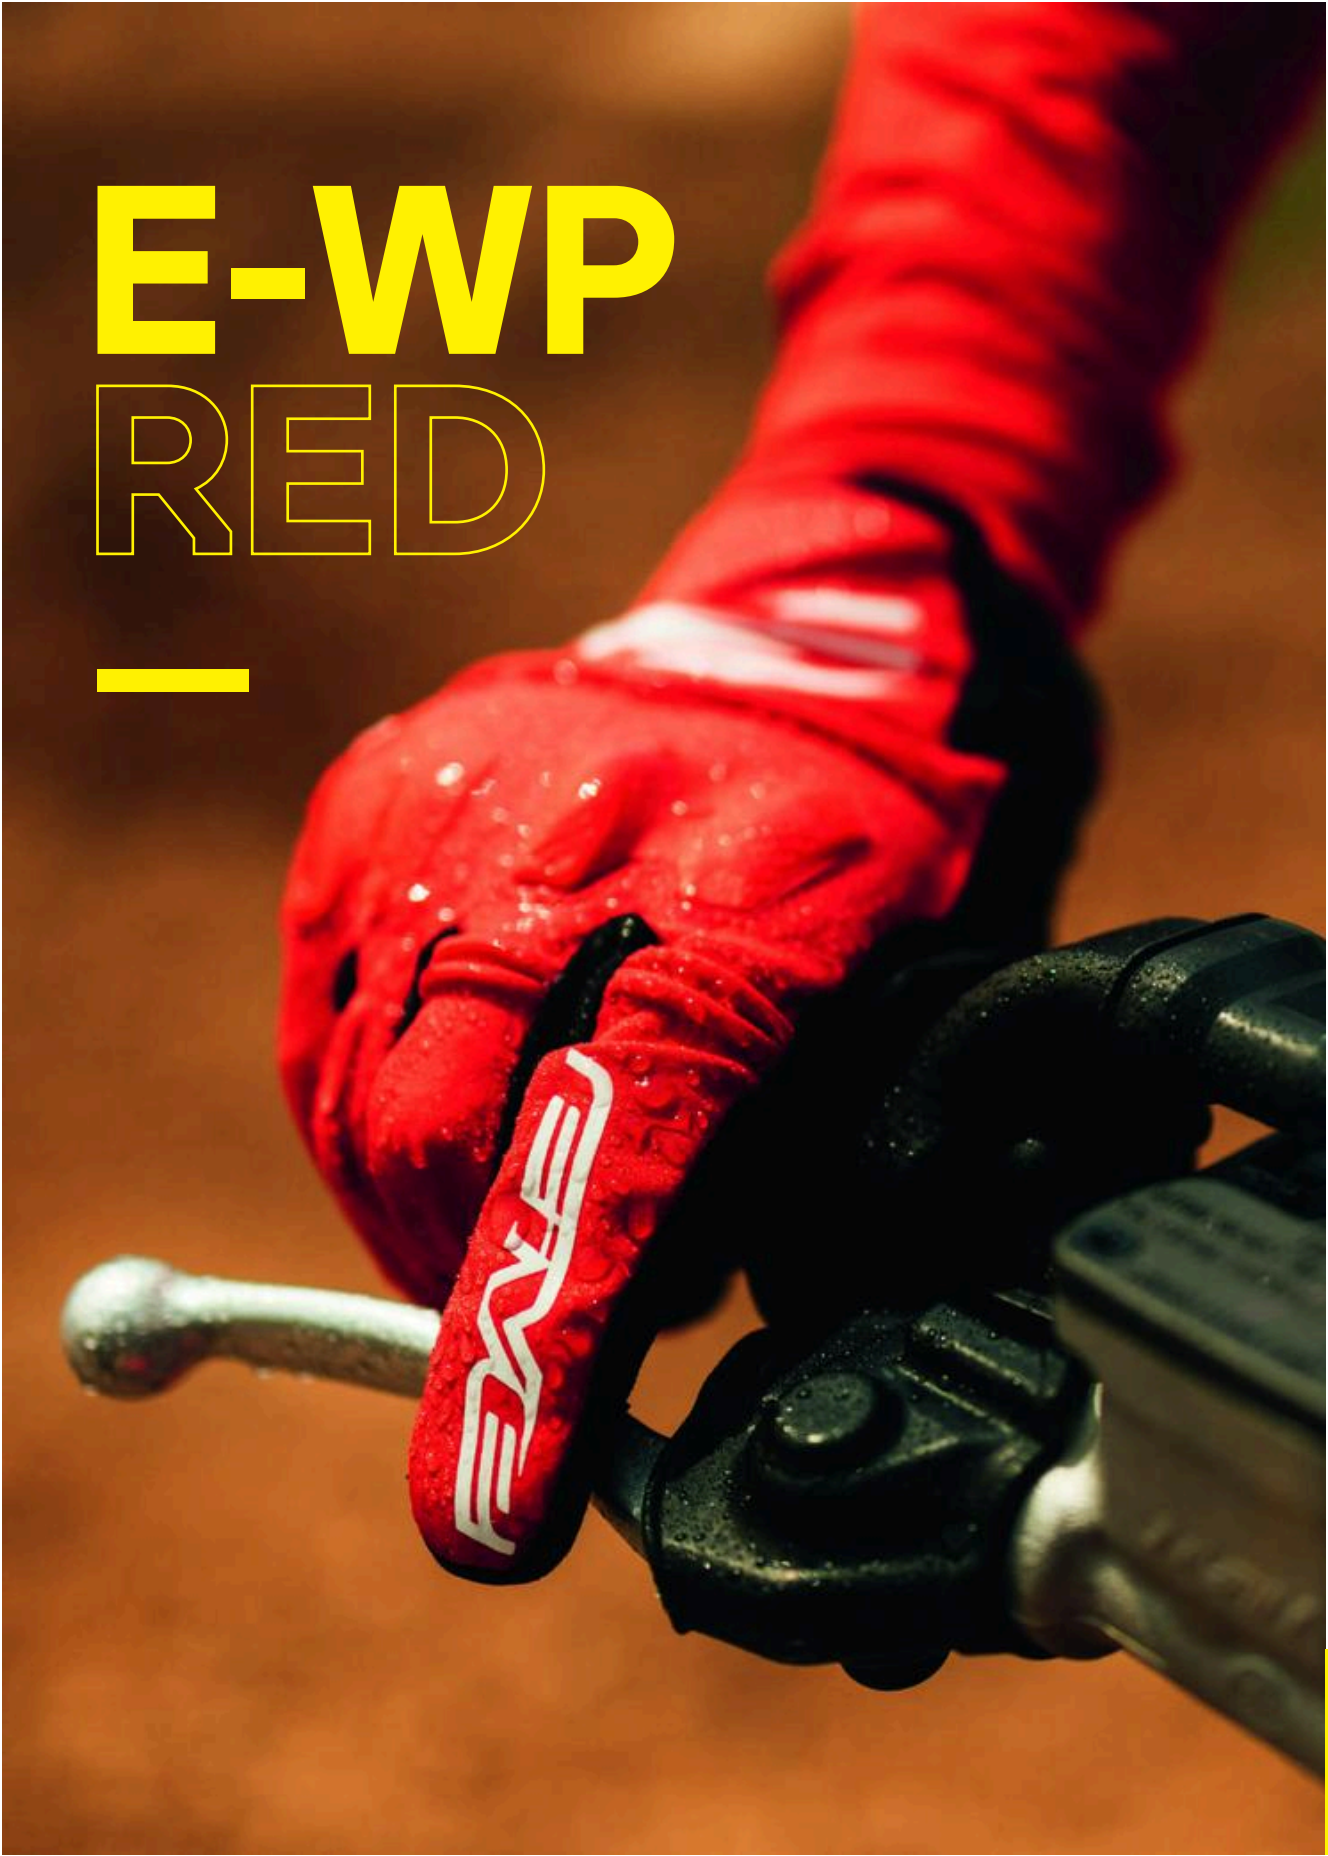

CAMO KHAKI

The E-WP is CE KP1-certified and designed for all types of terrain in wet conditions. Featuring a 5_DRYTECH™ membrane and a palm in AX Suede®, it offers excellent grip, protection against the wind and rain, and touchscreen compatibility.

- 01. Topside: Water-repellent stretch fabric construction
- 02. Palm: AX® Suede synthetic leather, embossed for perfect grip in wet conditions
- 03. 5_DRYTECH™ breathable, weatherproof membrane, partially bonded on the palm side
- 04. Dual ERGO PROTECH® protective shell in soft TPR, nearly undetectable
- 05. Synthetic leather reinforcement on the thumbs
- 06. Fourchettes (bands between the fingers) in Heavy Lycra®
- 07. Pull'N'Ride™ pull tab
- 08. TPR and velcro tab closure
- 09. Lycra® wrist gusset that keeps dirt from getting into the glove
- 10. Internal Bemberg™ comfort lining
- 11. Comfort gussets on the top of the hand and on the index and middle fingers
- 12. Foam reinforcements on the ring and little fingers
- 13. Clear Vision Pad™ visor cleaning system on the left-hand side
- 14. Touch Screen™ system on index finger
- 15. Vegan Friendly
- 16. CE KP1 certified (open-road use)

TECHNICAL — GLOSSARY

5_DRYTECH™ – Weatherproof / breathable and windproof membrane developed by FIVE specifically for two-wheeled vehicles. Allows perspiration to evaporate, while it stops raindrops from getting into the glove. Attached to the external structure and the lining of the glove with adhesive strips, so that it really stays put.

5_WarmTech™ – Specific 3-D polyester fiber, developed by FIVE, based on our experience in bike riding, to thermally insulate and protect from the cold. Placed between the breathable, weatherproof membrane and internal lining of the glove, this synthetic fiber traps the most effective of all insulating: air (and the natural heat from the hand)! Available in different densities and weights adapted to the different areas of the glove.

AirGO PROTECH® – A protective shell crafted by FIVE, with a trade-marked design, offering superior ergonomic and protective qualities, which includes an air inlet to promote ventilation of the hand.

Airprene® – Ultra-stretch polymer foam that offers excellent support, with a microcellular structure and perforations that ensure optimal air and moisture flow. We use it most often for the support and breathability it provides on the wristband.

Anti-twist ties – An element connecting the little and ring fingers, to stop the little finger from being x away from the hand in the event of a fall. Made from leather, in an accordion shape (a FIVE innovation) on our Racing gloves, in order to limit the range of motion without being constricting.

AX® Suede – A synthetic material made from polyester microfiber. An alternative to suede leather that offers the advantage of being machine washable. Designed to enhance functions such as dexterity, flexibility, skid resistance, moisture management, etc. Comes in many varieties, with many possible applications.

Bemberg™ / Micro Bemberg™ – An artificial textile fiber obtained from natural materials, including cellulose from a variety of botanical sources, and featuring a silky texture, used as a lining inside gloves in order to offer a pleasant and comfortable contact zone.

Carbon PVC – A protective element consisting of a carbon sheet between two layers of PVC, which gives it an optimal firmness/flexibility ratio. We often include a carbon PVC shell at the hypothenar, which we also call a palm «slider».

Carbon Thermoset – Thermoset carbon passed through an autoclave, originating from Italy. Used in aeronautics, Formula 1, and Moto GP. Used in the protective shells of our high-end Racing style, the RFX Race. Offers high skid resistance, extremely light weight, and an exceptional level of protection.

Cat Eye™ – A polyester-based synthetic fabric with a structured upper surface.

Clarino® – A synthetic material that emulates natural suede leather, used on the palm side for its comfort, skid resistance, and excellent grip. Machine washable.

Clear Vision Pad™ – A micro-terry cloth fabric panel that allows you to wipe off your helmet's visor or mask while riding. (A FIVE brand name)

CONNECTION KIT – Optional cable-connection kit that allows for the connection of FIVE HG heated gloves to the battery or cigarette lighter socket on the motorcycle.

Cordura® Stretch – Cordura®. A heavy-duty fabric that offers elastic qualities in its Stretch version.

DUAL CONTROL – Heating control system using a single button (implemented on the new generation of FIVE HG heated gloves) that allows for simultaneous control of the heating level in both gloves with a single button on the right hand, since both gloves are wirelessly connected.

Embossed – A textured effect that highlights a decorative element (logo or other).

ERGO PROTECH® – A protective shell crafted by FIVE, with a trademarked design, that can be visible or concealed under fabric or leather, offering superior ergonomic and protective qualities. Available in one-piece or double versions. The single-shell TPR versions include an internal honeycombed structure for optimal shock absorption. (A FIVE brand name)

GORE-TEX® GRIP Fully bonded – A weatherproof/breathable benchmark membrane offering superior weather-resistance and breathability, featuring the GUARANTEED TO KEEP YOU DRY™ pledge. Fully molds to the shape of the palm for exceptional user comfort and enhanced touch sensitivity.

GORE-TEX® GRIP Partially bonded – A weatherproof / breathable benchmark membrane offering superior weather-resistance and breathability qualities, featuring the GUARANTEED TO KEEP YOU DRY™ pledge. Partially molds to the shape of the palm, so that it really stays put.

GORE-TEX® – A weatherproof/breathable benchmark membrane offering superior weather-resistance and breathability qualities, featuring the GUARANTEED TO KEEP YOU DRY™ pledge.

GUTTERMANN® – A stitching thread originating from Germany. Used on our high-performance gloves due to its superior tear resistance and ability to limit the risk of cuts in the event of an accident.

HG / Heating Technology – Heating glove. Heating technology. A glove that is heated by resistors and either a self-contained battery or mini-cigarette lighter power cord. It's possible to adjust the level of heat by favoring the perceived temperature or the battery life. (A FIVE brand name)

HIPORA® – A weatherproof/breathable membrane offering excellent weather-resistance and breathability.

Hypothenar – A part of the hand that includes a group of muscles that govern the movements of the little finger.

KEVLAR® – A synthetic fiber that is extremely resistant to tearing, perforation, and skidding, made from aramid resin. This high level of toughness makes it a material used in, as one example, the manufacture of bullet-proof vests.

KEVLAR® stretch – Kevlar® fiber featuring elastic qualities.

Leather / Goat – Leather used to make our gloves, due to its superior suppleness.

Leather / Cowhide – Leather used to make our gloves, due to its superior toughness and durability.

Leather / Digital – Leather whose surface is laser-embossed to create a multitude of tiny prints to enhance grip on the controls in wet weather.

Leather / Full-grain – Leather that has its upper layer intact, thus featuring all the natural irregularities of the animal hide.

Lycra® – A synthetic fiber with elastic properties. We use it in the areas that require perfect elasticity, such as finger contours or the wrist opening.

Memory foam – A material made of viscoelastic foam that recovers its original shape when it is deformed. We use it in the zones that require impact absorption or as a comfort element.

Mesh Fabric – A honeycombed fabric that eases airflow.

Mesh Fabric 3D – A honeycombed fabric that eases airflow, with cells that feature a bulky texture.

Metacarpals – The set of bones that form the structure of the palm of the hand, located between the fingers and the wrist.

Nanofront® – A premium material from Japan, introduced by FIVE within the palm of our high-end motocross gloves, chosen for its exceptional anti-skid, slimness, suppleness, moisture absorption, and thermal barrier properties. Made up of fibers measuring 700 nanometers in diameter.

Nubuck – A leather finish that features a velvety effect obtained through scraping / polishing of its upper surface.

Over Size Cuff – A zipper adjustment system that allows you to expand your glove's cuff so that it more easily covers your jacket sleeve.

One Way Stretch™ – Stretch material that is inserted at the fourchettes zone (between fingers) of some models for optimal flexibility.

Palm reinforcement – Leather, fabric, or PU Grip elements that are designed to enhance the comfort of the glove on the palm side, its grip, and its chafe resistance.

Primaloft® – The best alternative to eiderdown, without its drawbacks. A high-performance thermal insulation material made from a trademarked synthetic microfiber. Developed in 1983 for the U.S. Army as an alternative to goose down, synthetic, insulating, and water-resistant. Offers a high level of comfort in cold weather by retaining the hand's natural heat. Available in different varieties and densities.

PU – Polyurethane. A flexible plastic material.

PU GRIP – A Polyurethane panel whose surface features hollow and textured dots that give it excellent grip in wet conditions.material.

Pull'N'Ride™ – A pull-tab that makes slipping on a glove easier. (A FIVE brand name)

PVC – Polyvinyl chloride. A highly stable plastic material that exists in rigid or flexible forms.

Reflective – Reflective elements that mirror headlight brightness, to make motorcyclists visible to others on the road during night-time riding.

Spandex™ – A Lycra®-based synthetic material, renowned for its elasticity. Used to enhance elasticity over a specific part of the glove.

Spandex™ 4-Way – A Lycra®-based synthetic material, renowned for its elasticity. Stretches in 4 different directions (up-down and left-right). Used to enhance the overall elasticity of the glove.

SuperFabric® – A material that is highly resistant to skids and to sharp or pointed elements, made of a fabric base whose surface is covered with a multitude of textured resin dots that form a protective barrier. It is also weatherproof and breathable. We use it mostly on our high-performance gloves.

SYNTECH SKIN™ – A synthetic material that offers a look and feel similar to natural leather, but with superior cut and tear resistance properties.

Synthetic Leather – For FIVE, a fine substitute for natural suede leather. Used mainly on the palm side due to its elasticity, durability, and comfort. Machine washable. A vegan material.

Thermo + – An innovative FIVE concept in winter glove insulation that reduces heat loss between the fingers and offers up to 20% thermal gain. Unlike in classic glove construction, the area between the fingers hosts insulation that is equivalent to that on the top side of the hand and not the thinner insulation on the palm. The resulting insulation creates a more efficient thermal barrier that keeps the hand's natural heat inside the glove.

Thenar – The rounded, muscular mound on the upper part of the hand, underneath the thumb.

Touch Screen™ – The inclusion of elements that allow for the handling of touchscreens without removing your glove. It is most often found on the index or the index finger and thumb, depending on the particular style of glove. (A FIVE brand name)

TPR – Thermo-Propylene Rubber. A material that can be molded or extruded above its melting point. Used as a decorative or protective element on our gloves.

TPU – Thermo-polyurethane. A plastic material that can be variably firm or flexible, obtained through thermo-molding. We use it for some of our protective shells.

V-Entrance™ – A specific method of assembling the wristband elements, developed by FIVE to make it easier to slip on the glove. (A FIVE brand name)

Vegan Friendly – A synthetic glove that contains no elements of animal origin in its composition.

Velcro – A contact closure system using tiny hooks and textile loops, commonly known as «scratch» in French.

VIBRA-LESS™ – Anti-vibration pads integrated into the palm, to reduce any vibration felt at the controls.

Water-repellent fabric – Fabric with a texture that allows water droplets to slip over its surface and thus slow their penetration into the glove.

WP – Weatherproof. A glove that features a waterproof, breathable membrane and can be used in the rain, because it keeps hands dry.

All brands or products mentioned in this glossary are the property of the firms, suppliers, or partners of FIVE Gloves or of its manufacturing units, and are mentioned for informational purposes.
